Thread: [Need help adding port rule to allow port to be open](#)

**dat boi** - February 14, 2015, 6:36 pm

I am having trouble port forwarding. I am setting up jRAT to use on my other computer in my house so I can have access to it from the computer that I am at. I just need to add the rule the allows that port to become open. My router is very complicated I will post the screenshot of the "add rule" at the end of this thread. Can anyone help me figure this out?

Rule Name: Anything

Protocol: UPD/TCP , if it doesnt give u the option to choose both read the Note

Source Ip: Your IPv4

Destination Ip: ^ same thing (I think)

Source port: Port you wanna open

Destination port: Same thing (pretty sure)

Mode: I dunno dafuq (i dont think it matters)

Direction: Inbound (Or outbound idk)

NOTE: IF U CANT DO BOTH AT THE SAME TIME UPD/TCP, MAKE 2 RULES, WITH SAME SETTINGS EXCEPT CHANGE THE PROTOCOL (1 rule with UDP, same rule with TCP)

There is literally no way to open up any port on my dusty ass router.
