Thread: [Was perma'd from my favorite server for using gDaap](#)

moxiog - February 14, 2015, 10:15 pm

How do I uninject gDaap? I went and did some stuff on another server, and then went and didn't even plan on using gDaap on my main darkrp server yet as soon as I joined, I was still perma'd. What do?

Hello. - February 15, 2015, 5:47 am

Bitch about it to the server's owner. Maybe "i cheat on every server but yours i am crying right now :(" will work.

RabidRunner - February 15, 2015, 10:13 am

lol you're a fucking idiot. It's all your fault. Cry to the owner, and that is probably all you can do.

moxiog - February 15, 2015, 11:49 am

well how do i fucking un-inject this bullshit? ill definately leave a review that it's detectable.

yungloungegod - February 15, 2015, 12:07 pm

Restart your game if you want it gone. Don't hack if you don't want to be banned

max1612 - February 16, 2015, 11:00 am

use the magic word of alt accounts to not rape your rep + main server

+rep - November 28, 2015, 4:03 pm

Do the admins know that it was an actual hack like that, or was it just an automatic ban?

If it was automatic, tell them that you have a bad computer and that the script only allowed you to use a command like mat_fullbright 1 because it helped with your FPS. Works every time for me.

SIM-1230922 - November 28, 2015, 4:05 pm

Just get an alternative account, Garry's mod can't cost a lot.

Once again, huge grave dig.

Family share bypasses most server bans

Also what was the ban reason

Loxsys - December 7, 2015, 9:36 pm

Gdaap is pasted and detected by anticheats (also infected)

Mand'alor - December 10, 2015, 8:14 pm

Make another steam account, family share gmod, don't inject gDaap, play.

Fingers crossed your favourite server doesn't have anti-family sharing on it, easily done but you'd be suprised how many people don't do it.

x00u - December 11, 2015, 1:11 pm

You don't, you charge back and uninstall your computer.
