Hawkeye Stealer ~ Keylogger

http://img412.imageshack.us/img412/7711/hawkeyey.jpg

Hey Guys.

Just finished making this project and thought i would share with you. If you don't trust the download then just don't download it. I was going to sell this but i decided to release for free instead, i don't need money. I have posted a scan of the stub and builder. At the moment it is FUD so i have urge that you all scan the file at novirusthanks.org with 'Do not distribute the sample' checked. This will steal most messenger Passwords, Firefox, Oprea, Chrome, IE and more passwords. This great keylogger runs on start up, has usb spread, icon changer and antis. Enjoy I think i will release the .net source soon.

Thanks guys

Mario

As there's no option In terms of choosing the Antis, I'm just wondering which ones are Included?
Anyway, I have confirmation on the file's cleanliness, by executing It with Norton and Kaspersky AV 2010 fully enabled, and there were no signs of malicious behavior.

Also for x64 users, It's running well on my Windows 7 64 Bit, so compatibility has also been confirmed.

Much appreciate It mate.

You're most welcome mate. You're correct In the methodology you utilized In adding the Antis.

I guess that as long as the main ones are Included, there's no harm In running them all via a simple checkbox option.

**** JIT Debugging ****

To enable just-in-time (JIT) debugging, the .config file for this application or computer (machine.config) must have the jitDebugging value set in the system.windows.forms section. The application must also be compiled with debugging enabled.

For example:

```
<configuration>
  <system.windows.forms jitDebugging="true" />
</configuration>
```

When JIT debugging is enabled, any unhandled exception will be sent to the JIT debugger registered on the computer rather than be handled by this dialog box.

Can you help me with this please? ><

If only you guys realized this is a modded version of Drops Logger :\

twist3dblood - July 16, 2010, 5:50 pm

can someone help me? I get this pop up that says its protected by an unregistered version of ezirz or whatevers .net reactor. ?

also i get this java error: (how do i put this in a spoiler?)

See the end of this message for details on invoking just-in-time (JIT) debugging instead of this dialog box.

JIT Debugging

To enable just-in-time (JIT) debugging, the .config file for this application or computer (machine.config) must have the jitDebugging value set in the system.windows.forms section. The application must also be compiled with debugging enabled.

For example:

```
<configuration>  
  <system.windows.forms jitDebugging="true" />  
</configuration>
```

When JIT debugging is enabled, any unhandled exception will be sent to the JIT debugger registered on the computer rather than be handled by this dialog box.

You download some Keylogger, witch actually is a Virus, so never mind :D

This upload is clean, even if it says there are Viruses, it won't infect you.

But some things here are infected, you should always check twice :D

But alone the fact that mothered gave his/her endoresment, is enough for me =)

budhabils: Is that the original file?

Michinked - December 9, 2012, 12:22 pm

I wouldn't trust that file if I were you, he might have binded it or some shat. Anyway, I'd love to test this once the new link is fixed. Hope it's soon enough.

please mate i need your help on these Hawkeye Keylogger|Stealer [Direct download][NEW]

(Jun 9, 2010 06:02 AM)-mothered- Wrote: [\[CITE\]](#) You're most welcome mate. You're correct In the methodology you utilized In adding the Antis.

I guess that as long as the main ones are Included, there's no harm In running them all via a simple checkbox option.

i need your help i need this product mate
