Thread: [How to create & use Bitcoin mining RATs?](#)

pcx436 - February 19, 2015, 8:15 pm

So I've only recently gotten into mining Bitcoin, but I know a bit about using Darkcomet RATs. I've got a few installed. I'm currently unaware of how to use these captured PCs to mine for bitcoin. I've looked around, and I haven't found much. I found a free bitcoin miner RAT but I couldn't decrypt the link because I'm a noob. Any help or advice is greatly appreciated!

You wouldn't make any profit mining Bitcoin with few PCs.

How bout using your brain - February 20, 2015, 3:48 am

you are about two years too late for that

I'm getting more everyday and I'm planning on hacking my College's computers, there's a ton of them and they're high powered

you can't make any money from bitcoin with normal computers.....

Cyrus - February 23, 2015, 1:12 am

You're better off mining altcoins then exchanging them to BTC.

You can do this with the RAT Imminent Monitor 3, if you plan on spreading to thousands you're better using a botnet.

Vamp0000 - February 23, 2015, 1:20 am

You would need like hundreds of PC's to make any money mining.....

"College computers" That will get you kicked out FAST. If its a college im assuming someone whos taking any tech course will be able to backtrace you in literally 5 seconds. In other words, dont.

Also, bitcoin mining on a bunch of "higher than average" PC's still wouldnt make money.

PoisonKnife - February 23, 2015, 4:13 am

You won't make much on mining BTC on bots.

The difficulty is to hard.

There are better ways to make money on your bots.

If you have a large botnet, you can run Pay Per Download (PPD) or Pay Per Install (PPI) on them and easily make \$100 a day.

You could also use them to click on ads through a reverse proxy like that on Netwire.

Sure, if you are fine making 10^{-9} cents per day

Rat the computers then upload and execute a silent miner mining alt coins (Like litecoin, Dogecoin, Or hackforums own Omnicoin) Bitcoin is unprofitable without 2TH/s Miners but alt coins are easy to mine on regular computers.

I RATED some local library computers to install silent miners and some other things then uninstalled the rat, that way they cant really find you anymore, Only a process with your mining info at the most.
