Thread: [How can I get a guaranteed VAC Ban in alot of VAC protected games..](#)

JohnJohn - February 21, 2015, 12:21 pm

Hey guys, Im trying to get banned in alot of VAC protected games, I changed memory around in alot of them with cheatengine for example + I injected old detected cheats. Can somebody maybe code a simple dll which triggers a simple gernal VAC ban? Maybe a simple EndScene and DrawIndexPrimitive Hook...

The Games I try to target are different for example moonbasealpha, cs1.6, also a game called clickr which is wierdly VAC secured.. Thanks in advance!

Since you know what you want, why don't you do it?

Use detected cheats, or inject with cheat engine and change hp and speed, then join a server.

unknown2me - February 21, 2015, 12:58 pm

speedhack in cheatengine normally results in a ban within 1-3days

Mcmad358 - February 21, 2015, 4:45 pm

Cheat in Rust, CoD, use detected hacks, it is not that hard :P

Chocola - February 21, 2015, 4:47 pm

If you can program, you can bytepatch EndScene using MSDetours and that will get you VAC banned.
