How come you sell this ? It is free all over the web..

Not trying to ruin your sales, but most people know this

jcbullet - February 24, 2015, 10:30 am

Because people sell them for \$20-\$30, Im not going to lie about its detectability, I remade the code myself and its not as simple as you would imagine.

Ill do it for \$5 BTC. :) if anyone wants it.

good service, its on the internet but if the seller guarantees a working product, than why not

its also on the internet how to make a car, does that stop you from buying one?

Exactly, It actually works and i have methods in which i will share on how to get the user to press enable macro. It is still "Silent" in the sense they dont know whats happening, Which i think is the vector the sellers are using to sell the macro.

the only true exploit is the buffer overflow.

1984 is a wicked book btw bro! ?
