Thread: [BYPASS your VPN for hackforums.net \(STATIC ROUTING\)](#)

robby_j - February 22, 2015, 12:17 pm

Everyone has their VPN online right? How annoying is it when you try to come here and your ISP is blocked. It sucks. Here is the fix. (Keep in mind I am using Kali Linux.) The windows fix is literally the same thing. Maybe slightly varied commands that you can look up if you use windows.

Open Terminal:

Code ping hackforums.netcopy ip

Code ctrl cto stop the ping.

Code ip route add (((hf.net ip))) via 192.168.1.1 dev wlan0Done. Now this will reset once you shutdown your comptuer. If you want it to be set like this forever, change it in the ip route config file.

Dumb I have to say this, but no nothing posted here is against HF TOS. You are not bypassing HF ban system. You are bascially saying "Hi, Mr.VPN, I need you to turn off when we go to hackforums.net, but I need you to be working everywhere else.

The Listener - February 22, 2015, 3:51 pm

This will be helpful I always had to turn off my VPN

(Feb 22, 2015 04:52 PM)Mommy????????????? Wrote: [\[CITE\]](#) I dont think that this is a good tutorial to be posting on HF lol

theres a reason why VPNs are banned, shouldnt post on how to bypass the ban lol
I was going to say that.. This could help people who want to hurt HF :(

Kingstonz - February 22, 2015, 3:56 pm

VPN's aren't allowed for a reason Mommy is right.

I'm not familiar with Kali, but I'm pretty sure this is just adding an exemption so your VPN doesn't force your connection to get blocked. You can keep your VPN online but it isn't used for connections to HF.

robby_j - February 22, 2015, 9:03 pm

You all missed the point. In no way is this against any HF rules. You are adding an instance where your computer does not pass through your vpn while online. also this isn't kali os specific. this works for all linux distributions.

Emorrow - February 22, 2015, 9:15 pm

lol @ the people that have no idea how this works. This isn't by any means circumventing the ban on VPNs that HF has in place. Its routing it so your connection to HF isn't covered by the VPN.

Anyways, thank you for this. Already knew this, but I didn't realize how many people didn't, and didn't even know what this was. So nice share!

Sennheiser - February 22, 2015, 9:16 pm

doesn't always work

here is the ip's to use in the static routes

141.101.121.10
141.101.121.9
141.101.121.12
141.101.121.13
141.101.121.11

add all these to the routes to get full access using ur vpn

141.101.121.13
141.101.121.11

add all these to the routes to get full access using ur vpnThat is why I suggested using the ping command. To find out which ip you are connect to.

Comedic - February 23, 2015, 4:42 pm

Another nice tutorial cl0ck, will try in the future :)

Thanks.

swatcity - February 23, 2015, 4:48 pm

That is why I suggested using the ping command. To find out which ip you are connect to.the issue is it DOESN'T work with all linux distros, only debian based (in theory) not sure about gentoo/centos/etc

robby_j - February 23, 2015, 7:53 pm

Thanks.? Let me know if you need the windows commands. Not sure what OS you run.

(Feb 23, 2015 05:48 PM)swatcity Wrote: [\[CITE\]](#) the issue is it DOESN'T work with all linux distros, only debian based (in theory) not sure about gentoo/centos/etcIn theory? All linux distros offer static

routing. Whether a command is slightly different, well, that you will have to look up. If you need help with a specific distro, let me know.

Autonomous - February 23, 2015, 7:55 pm

Omni said that if you can find a VPN that works on HF you can use it at your own risk.

for those who are saying VPN's are banned, they are only banned for your safety.
Prevent's A LOT of multi-accounting and etc.

Yertle - February 23, 2015, 8:29 pm

This thread is posted 100 times already :/

Emorow - February 24, 2015, 12:41 pm

Yes, by a simple search you can see that this has already been posted. A lot of people OBVIOUSLY didn't know what this was, or how it worked therefor how would they search it? Its up on the first page now and in a few months I'm sure it'll be posted by someone again. It's helping the community either way.

?C???I?x??? - February 25, 2015, 10:35 am

I like this use it all the time, Helps me a crap ton thanks OP

who is going to search static routing. either way, it helps people who don't know. what doesn't help, is a useless post like yours.
