Thread: [My WiFi Pineapple Tutorials](#)

FractumSeraph - February 22, 2015, 2:13 pm

MOVED: <https://hackforums.net/showthread.php?tid=4579313>

If you have any requests, feel free to ask me.

I'll make the thread design look better later.

This is where I'm going to be posting a bunch of videos showing you what you can do with the WiFi Pineapple. (You can do most of this with Kali Linux too)

[Setting up the WiFi Pineapple](#)

[Cracking the password of a WPA2 Wireless network](#)

[Sniffing Passwords on a Network](#)

Usefull DIP Switch Configurations [\(Click to View\)](#)

These aren't videos, just useful things.

This one will automatically start capturing packets and save them to a capture file. Great for retrieving WPA passwords with my video above. (Requires SD card)

Code `ifconfig wlan1 up; airmon-ng start wlan1; airodump-ng --write /sd/captures/capture mon0;`

This one will automatically start the PineAP suite as well as SSL strip. Useful for password sniffing. (Requires SSLStrip infusion)

Code `pineapple infusion pineapple start; pineapple infusion pineapple clearn_ssids; pineapple infusion pineapple dogma start; pineapple infusion pineapple responder start; pineapple infusion pineapple harvester start; sslstrip;`

nobby - February 22, 2015, 8:14 pm

Hello

I was wondering if you could do a tutorial disconnecting everyone trying to connect to a network using wifi pineapple(not own network).

Thank you

Thank you

I can when I get home.

All you need to do is `aireplay-ng -0 0 -a 123 mon0`

Where 123 is the Mac address of the router, and mon0 of your wireless card.

I am about to pick the pineapple up for use at work conferences. Is it a good deal for the price?

FractumSeraph - February 23, 2015, 7:08 am

The pineapple itself is a great deal, but I wouldn't justify spending extra for the bundles. I'd just get the pineapple, battery pack, and the wifi card. You don't need all the extras.

Updated with SSL Strip.

Also, I forgot to mention that a deauthentication attack can target a specific client instead of the entire network. Just replace -a with -c and put the clients MAC address.

can you do a youtube tutorial on jamming wifi signals

Master Beta - March 7, 2015, 4:58 am

cheers for these, I'll have a play around with some other things too :D but this is a good starter tutorial

anticliche - March 8, 2015, 5:43 am

Hey thanks for this, my Mark V is coming any day now and I need some starting place

Mr.Peanut - March 27, 2015, 1:31 pm

I haven't gotten the Pineapple "yet", but I'm bookmarking this for that one day.

dataharvester - March 27, 2015, 1:42 pm

I have two of these got em for christmas they are pretty cool to mess around with.

Sure.

If it's a specific wifi you're wanting to jam, you could do a never ending deauth. Also, the pineapple suite could effectively jam all wifi if you don't give it an outbound connection.

I haven't used it in a while so sorry if I'm a bit off, but I believe the never ending deauth would look like:

```
Aireplay-ng -0 0 -a wifimacaddress wlan0
```

UPDATE:

I've decided to merge this thread with my other one [here](#):
