Thread: [\[TUT\] Call Spoofing \[TUT\]](#)

**Mr Kewl** - June 9, 2010, 7:03 am

Earlier there was a call spoofing method but its not working now, but I have come across a new method fully working. Use it to call anyone using someone else' number. You can also change your voice pitch so that the other person can't recognize you.

Warning-Only for educational purposes.

1. Open [www.crazycall.net](http://www.crazycall.net)
2. Select your country and wait for the page to load.
3. Enter the number you want to display in the first big box (Dont change the contents of small box if the fake number is of same country).
4. Enter the number you wish to call in second big box.
5. Choose voice pitch as normal (for same voice) or high or low pitch to change your voice.
6. Click Get me a code.
7. Dial the number shown on right and enter the shown code when asked.

That's it! Remember International call may rates apply.

Don't use for illegal purposes.

A very simple android app to spoof your phone number.

Spoof Pro

<http://www.spoofpro.com/>

Not bad since it has a free 10 minutes thing, but it is real simple layout, easy to use, and stable.
