+ BIIIIG Vouch for Miki

I only can recommend this awesome crypter to ANYONE!
It's FUD, the crypter is nice n' easy and one of the best I saw soo far for this price on HF!
This guy really nows what he is doing.

First I had some problems with the crypter (I just made a mistake, so it isn't his fault).
However he helped me to solve my problem!

Do you have C# stub in lite version?
seriously..

Kill?Muvz - *February 24, 2015, 10:47 am*
Everyone is opening Lite crypters and driving the price down. Don't be surprised when your stub gets detected in 1 day.

I've had a lite crypter for ages, why shouldn't I make a better one and release? Don't really care I can re-fud every day if I have to.. ?

DOes it have an auto update? for if you update the crypter? If not, is the next version free for lifetime?

wat iz dat - *February 28, 2015, 6:51 am*
His support is awesome - vouching for it. Crypter doesn`t work but he tried hard to fix it.

-Zeus- - *February 28, 2015, 7:20 am*
This crypter looks amazing, compatible with so many botnets, has startup, cheap price, FUD...

I think this is totally worth it :)

SolarEclipze - *February 28, 2015, 8:55 am*
I can't download.. :L When I download it stops halfway through and opens a winrar file with the .exe but when I open it then the client says "Unexpected end of archive"

IaTrojan - *February 28, 2015, 12:13 pm*
why cant i purchase says go back to your merchants via paypal...
can u pm me please with another download i bought ur crypter but it dont download it goes halway then stops

Hey just purchased your product and looking forward to use it xD however I'm very paranoid downloading anything online and I was just wondering why it creates a file DiverseBasic.exe inside AppData\Local\Temp when I run the program? Is this normal? I assume it just has something to do with login/saving login credentials, etc.

Yes it's normal.... why you being paranoid.. it's to do with the netseal licensing program.?

It's to do with the netseal licensing program, and not my crypter, go bitch to aeon thanks.

This guy added me in order to bring me support. Leave me 2 messages, told me to do useless things then just ignored me. Is that support ?

Great crypter, real cheap and good results (made my file 0/64), thanks for answering the question I had. :)

I could leave a vouch for you, but crap support, Crypter worked 1 day then keeps crashing.

Basically refud will be done shortly, due to retards scanning on VT when it clearly says to use the free scanner provided.... SMH

stenso - *March 11, 2015, 12:15 pm*

Latest update seems to be running a lot smoother. Snappier to open and crypt.

I'm also having issues, trying to use crypter with nanocore and I even selected .net since nanocore is .net and not native however it does not work. I have all options unselected in nanocore, it works fine unencrypted, then when I crypt, it breaks. Also started receiving a message "License locked, please contact an administrator."....maybe IP limit?

(Mar 11, 2015 04:39 PM)xal3xhx Wrote: *[CITE]* sounds awesome but before i buy i was wondering how often dose this update and is it currently FUD

The normal FUD times are 5 days + with a good hw icons from icon archive, 48x48 and 64x64icons seem to work the best but I do daily refuds due to customers asking so I can do so if I have more time :)

SIM-2096295 - *March 11, 2015, 6:53 pm*

Icons can improve FUD? Does using my own icon suffice, or is it dependent on being an icon from icon archives as you stated?

newQuery - *March 11, 2015, 8:39 pm*

Just bought the crypter.
Tried with a Nanocore server.
So yeah it does crypt the file, and it isn't totaly FUD. And more than that, after crypted, you can run the crypted file, you wont get any slave. You can bind it to something, but wont slave it. Maybe it's an issue with NanoCore but i don't think so.
Fix it pleasE.

Server: Xena RAT
Setting:
1.Stub -> Autoit
2.Install File -> Add file to Startup
3.2 Clicks in Encryption-Key table
4.Injection -> Windows Explorer
5.Crypt File type -> Managed (.Net x86)

These are my settings and WORKS very fine !

Settings used for nanocore: Spoiler (Click to View) everything works as it should, client shows up when server is executed, computer restart and client comes back up (after some delay) however one issue I have left is the client (my PC) hears dings; windows error sound every minute or less as if some process is having some issue. For some reason on my crypted client, every minute (on the dot) a windows alert sound occurs and in the task manager 1 more conhost.exe and schtasks.exe are executed, this continues ?indefinitely? so if a user saw 50x conhost and schtasks in task manager it would be quite obvious something is wrong (not to mention the windows alert sound every minute). I'm not sure if this is an issue with the settings I used or if this is supposed to happen. If you could lemme know would be amazing as everything else is now working :)

You're paying $7/m for a crypter. 2/35 on scantime doesn't mean it's going to be detected runtime, as stated by Miki on page 19 it's a false positive.

Nyan~

Will buy in the next couple of days and come back to edit this post after testing etc.

Looks like its quite good, heard some good things.
Will be testing most likely with DarkComet, NanoCore(only trial version, but should still stand), maybe a few others)
If you're interested in purchasing, watch this space :)

Vouch, btw.

im not sure if it is just darkcomet or something with the crypter but when I control the server every so often the server crashes and never comes back. like I said not sure if it is the crypter or not. also could you add persistent processes to this crypter I think that will be cool.

blackm16 - *March 24, 2015, 12:49 am*

It's a basic crypter, and no won't add persistance. Sorry ?

Try these settings for DC:

no startup in dc/no startup in crypter
choose random encryption key (tick the box a few random times) (2-5)
1-2 bars of junk code
HQ icon

HQ iconMaybe i've missed something but with no startup, the server won't start back up again after the system has been restarted etc.
Maybe its the best settings for compatability but not very useful.
I used the startup and install that are in the crypter and i dont seem to have any issues.(Except ofc not being able to uninstall/update server from DC).
Again, maybe i've missed something from what you said but with crypter's startup seems to work ok for the most part.(It is unfortunate to not be able to uninstall and i presume not be able to update as well?) Havent needed to update so far, crypt has remained pretty much FUD since I've had it.
Sorry for the long post, a response from you to clarify things would be great :)
Thanks

First of all, Avast isn't so bad tbh.
Second, use a High Quality Icon and youre fine from Avast etc.

Ah oui ? Et comment ce fait il que pour moi, des que je test mon stub sur une VM, un icone "AutoIt" apparait, l'Icone de mon serveur.exe apparait dans la barre de tache ? Et que je ne recois AUCUN slave ? Pourrais tu partager tes settings ?

tomu02 - *March 26, 2015, 3:57 pm*

tres tres bisarre mais evite de tester sur une vm car sa me parrais pas stable pour tout sa et si tu recoie pas de victime il peut y'avoir plusieure raison entouqua je te certifie qu"il marche avec nanocore tu a pas cocher une option sur nanocore en conflie avec une des option du crypteur ? je précise que moi je parle de diverse basic
allume juste les 3 option de nanocore les 3 premiere quand tu config avec le startup de nanocore et dans le crypteur tu coche aucune option tu le flash sait tout et sa marchera entouka pour moi sa marchais

This crypter is working, it took time for me to understand what features to use wich is:
-Autoit
-Add file in startup (set a folder)
-Set an encryption key by clicking several times on the little squares
-File type: Native

How ever! The crypter breaks the "Stored Password" Function of Darkomet :(

Merci a miki pour son aide précieux et la bonne configuration qu'il ma donner :) sa marche bien avec nanocore je recommande a tous ce crypter vraiment pas cher et fonctionne très très bien

vous pouvais acheter les yeux fermer
Miki a thank you for his invaluable help and give my good configuration that works well with her :) NanoCore I recommend to encrypt everything really cheap and works very well

you could buy eyes closed

vouch for you Miki, one of the best on HF..... keep it up bro

amagos10 - *March 28, 2015, 4:23 am*

Vouch for Miki.
Fast transaction, very supportive and helpful person. The crypter is cheap, very easy to use, and FUD for many RATS i tried.

Lifeyz - *March 28, 2015, 9:14 am*

Why is it crashing as soon as I try to crypt?
Help me please, I'm really enjoying your product otherwise.

Darkcomet settings?:
No statrup in DC & crypter.
choose some random encryption key
add 1-2 bars of junk code.

Sadi this millions of times before.

I ended up making a small program to manage the startup/persistence. A small modification on my dropper(can find it on my profile if you want it, but its an old version there).
With that, it works perfectly so far :)

Then use the statrup in the crypter provided? or use an delayed execution.. ?

amagos10 - *March 29, 2015, 2:06 pm*
For all those having crash problems with the crypter, read:
If you're crypter is crashing after crypting a file, these reason might be why:
1) Cracked or outdated botnets/rats are unstable (ex. athenaHTTP/IRC, Plasma, etc), and cause a crash when crypting or Aut2Exe errors poping up. (https://i.imgur.com/iM0HPKo.png)

2) The file type can result to a crash. Make sure to read how your RAT is coded, and select the correct type.

Also a big thanks to Miki for having to deal with me for 2 days, and staying up and helping me out with every little problem until it was fixed.

snakeman770 - *March 29, 2015, 4:46 pm*

Not so sure what I am doing wrong. I am trying to crypt CyberGate server but when I click BUILD the crypter shuts down. Please help

Who is using Diverse Crypter v3. Please PM me, I have problems using this version. I have Cybergate and NanoCore but all don't work. Everytime I crypt and press build, it shuts down. I never had this problem in Diversebasic. Somebody said It is cracked or outdated botnets, No it is not. I was chating to Miki himself and he said it is EOF, not it is not. I tried native and framework 2.0 none works.

starter this crypter 100% fud runtime ? fud node32 memory scanner ? how day fud?and when update stubs ?

GLoSeC - *April 6, 2015, 7:56 pm*

i ran this scan on 3 scanners shows it bypass's avg. i run the stub on friends avg pc and avg detects?

FazeEm - *April 6, 2015, 10:29 pm*

Just wondering but what site should I scan on? Also kind of need some help with the settings with dark comet.

There is an in-built scanner and he has mentioned settings for DC many times.

If you're having trouble, im not busy so message me :P

c3751230 - *April 7, 2015, 3:00 pm*

Unfortunatly we can't speak of FUD anymore...

3 detections

Kaspersky bothers me a little bit, because it is one of the popular AV's, infact, Kaspersky was the first AV i ever used.

And if one AV detects it, soon every other will detect it, because im sure that the result is going to be destributed in one way or another.

Switch your firewall and your av off, and run as admin, try again.
Like i said this so many times, use an icon from iconarchive, avast is becoming a false positive again so is k7 sometimes...

Here is scan & I'm back:

Anyway I love the structure of the product and the updating system.
Just you, it works perfectly fine for me. It takes a while, but that's the website. Not the program.

hey man i have the same problem with the error 429
what should i do ?

DarkxReaper - *April 23, 2015, 3:53 pm*

I had the same issue, my crypter whenever i crypt a file it just shuts off on me. Anyways I wanted to get a fresh download before and try again before I reported anything, but I can't download it now because of the Error 429. This happened to me before, if you upload anything like a crypter, or a server file and dropbox detects it, this happens. I would try uploading on to another site, or try re-uploading.

Question, the dropbox isn't working, so whens the update/fix going to be when the Crypter works?

cryzeo - *April 24, 2015, 10:31 am*

I bought it 1 month ago. It is really good. Long FUD times. But scanner function crashes. I can't figure it out.

nolfx - *April 24, 2015, 10:41 am*

its good and all that is fud
but i bought it yesterday and its says update required and then dropbox dosent work

days are wasting in it

Dutch_Apple - *April 24, 2015, 12:50 pm*

Yeah, its not working at the mo.
Its set up so it must be updated upon each opening, the dropbox download link is down due to too much bandwidth usage i think.
Until he gets it updated and gives out a new download link its not gonna work.

We're waiting until then, messaged you Miki :)

Cheers

LickPicky - *April 24, 2015, 12:51 pm*

Use an icon makes a great results, you probably not using icons, and your detentions are most likely false positives. ?

On the page where the options 'Native', 'Managed x86' and 'Managed MSIL' are.

Select the one called 'Managed x86' :)

Then njRAT will work just fine

Never was I told I couldn't use a scanner besides the one built in.

When I asked you why the scanner was crashing the program, you then responded "scanner not my problem must be site problems."

Can I be unbanned or refunded please.

The scanner DIDN'T work!

I asked you about it and said it wasn't your problem?

So I went on a site lol.

Then just refund me my BTC please.

Won't refund you, scanner don't work maybe becuase the site was down as so is the api? You should wait or contact me, it was back up shortly anyway. ?

I did contact you, you said the scanner was not your problem.

Would you PM me or contact other then this thread?

It is not my problem, if the site is down, I just pay for a monthly api, that's it... I do not own the site all I do is buy api for 20$/month. Not my fault if its down or not, thanks and please refrain from ever posting on my thread, I won't refund you, have a nice day. ?

ALL you had to say was that and told me to wait for it to be back up.

You were not clear or helpful when I asked you for help.

Why don't you be less of a dick and let me back on or at least refund me.

I made a mistake using VirusTotal, but this was the first crypter I had used.

I didn't know, I'm admitting I made a mistake.

Can you be a bigger person as well and let me have rights back or at least issue me a refund.

I would rather use your crypter if you would allow that.

Hi,thanks for the help before.I was stupid enough not to notice the actual settings for my rat. wanted to ask, are you thinking of implementing an extension changer into this crypter?
EDIT : If you are not thinking of doing it.Probably wrong topic but.. Anyways,would you know any possible way to actually change the stub file type from exe without breaking it?
Also,would there any possibility to crypt .src files in your crypter, as currently it only allows it to be .exe...
Thanks in advance,and sorry if I said something completely stupid,I am just new.But hoping that you will understand what I mean (:

This makes the 2nd time i have had to complain here just to get an answer.... Everytime the crypter opens goes through the netseal login i get an error saying this.....

Looks to me like there is a serious issue that your not fixing let alone it not being fud..... Since i have purchased using custom icons and making my own high resolution icons coming in at 361kbs there is no reason it should come up with 4 detections please fix your product...

DarkxReaper - *May 11, 2015, 3:34 pm*
I have the same issue, i think my AV may have messed with it or something, but then when i try look on the programs list to uninstall than i couldn't find it. I need help so I can re-install without it doing the "Padding is invalid and cannot be removed" glitch

Hi friends ,

I have been using this crypter with much success.

Here is a tip:

Get IcoFx (Torrent for full version very easy to find).

This tool allows you to make .ico icons from an image.

now find a random picture from the internet (the more random pixels the better) and use it to make an icon. I get 0/32 everytime and change my icon every time i refud.

DO NOT use icons that are common / bundled with your RAT.

Cheers,

Grimsoul

OP helped me out on skype.

Got these results:
Edit: removed by OP, as he said they were false positives

zimbot - *May 12, 2015, 4:42 pm*

Followed sellers instructions. Literally tried every different setting possible on various computers. Used this with njRAT and then even tried to use it with darkcomet.

This crypter does not work and on top of that was not even full undetectable as the seller claims. I bought this crypter because of it's price, but I now realize that I should have just forked out more money to a more trusted member and more expensive crypter.

Good Product bro. I just purchase though I got 4/64 But sincerely this is better off than so many shitty crypter on HF and the price is unbelievable!. Guess some detection are as a result of some icons. Please keep the good work.

Thumbs up!

Miki - *May 19, 2015, 12:46 am*

Big difference between working and should work..i wont be spending money on it if it s wont be working so i would like a sold answer OR a refund if i buy it and it don't work.
If u want i can send u my file and u can see, or i buy it and if it don't work (with proof of Course) you give me a refund.

Don't provide discounts, but I can ban your license from basic, and upgrade it to v3 , but you have to pay the difference of whatever license you need. Talk to me on skype for more info. Maybe we can work something out.

I add a image file to the multi bind tool and crypt it but it doesn't work.

I have tried:

1. Crypt just the rat.exe, works fine.
2. Bind rat.exe + jpg (also tried .exe, .mp3) with Multibinder from Diverse and crypt it, doesn't work.
3. Bind rat.exe + jpg with another Binder then crypt with Diverse, doesn't work.
4. Crypt just the rat.exe, then bind it with a jpg with another Binder, works fine. But it's easily detected by AV because the Binder is not fud.

Hey Miki I need some help with both Diverse Crypter 3.0 Enterprise version and diverse crypter basic lifetime. I bought both, and neither work. First of all, the enterprise version doesn't even crypt the files. Well it creates the new file and all but the crypted application can't even be opened. The problem I have with Diverse Basic is that the serial that was sent to me isn't correct. Can I contact you through email or skype? I don't have 25 posts on here to pm you. I'm using njrat.

I'm going to buy this within the next week, although would like to know your opinion on the current best paid or free R.A.T. program that works with this crypter/binder.

Why waste money on .net stuff, when you can get an old skwl rat such as cybergate or darkcomet and its free for now? ?

ukriau - *June 4, 2015, 1:33 pm*
I bought your product a few days ago and until now it has not worked. I have asked you to add me on Skype a few times and you haven't. I would like a refund since it doesn't work and I already bought another crypter. My Skype id is imba.dip

so added ! waiting for your respond sir ^^

ukriau - *June 5, 2015, 5:48 am*
For anyone thinking about buying this, DO NOT. The crypter does not work as several others have posted here, including myself, and this thief will not refund you.

I bought it several days ago and crypter doesn't work at all and he refused to refund me.
hello yes
[14:22:33] Mik: what seems to be the problem
[14:22:41] Mik: and this
[14:22:42] Mik: you said onmy thread you have pmed/me contacted me
but i dont see how not got any of your pm's sir
[14:23:07] Imba Dip: i don't have 25 posts so I can't send pm
[14:23:22] Imba Dip: anyway the crypter just doesn't work, i bought it many days ago
[14:23:33] Imba Dip: i'd like a refund since i already bought another one
[14:25:13] Mik: erm
[14:25:16] Mik: what doesnt work
[14:25:18] Mik: you diidnt tell me
[14:25:24] Mik: so the fault is on your sir..
[14:25:35] Mik: not me
[14:25:40] Mik: you did not contact me
[14:25:50] Mik: and i state di would be away until yesterday...
[14:25:59] Mik: yesterday ive answer 30pms

[14:26:02] Mik: and 20 skype msgs
[14:26:06] Imba Dip: I posted on your thread several times asking for you to add me
[14:26:20] Mik: can you link me to posts
[14:26:21] Imba Dip: I also posted the problem with the crypter if you what I posted
[14:26:33] Imba Dip: if you read*
[14:26:38] Mik: please show?
[14:27:25] Mik: ?
[14:27:26] Imba Dip: post 637
[14:27:29] Imba Dip: post 640
[14:27:53] Imba Dip:post 642
[14:28:05] Imba Dip: anyway I don't want to try and make it work it anymore, just refund me please
[14:28:09] Mik:
[14:28:14] Mik: like i said
[14:28:19] Mik: i was away had hardly any intertn access
[14:28:21] Mik: ...
[14:28:33] Imba Dip: that's not my problem
[14:28:35] Mik: and there is no refunds
[14:28:42] Mik: as you've got the license
[14:28:45] Mik: and redeemd the code
[14:28:49] Mik: so there is no refunds
[14:29:07] Imba Dip: your crypter does not work and several other people posted on the thread saying it doesn't work
[14:29:18] Imba Dip: did you post a solution or did you say you fixed it?
[14:29:45] Imba Dip: i have 26 days on my license and the crypter still doesn't work
[14:29:53] Imba Dip: either refund me or i will do a charge back
[14:30:19] Mik: what is your email
[14:30:20] Mik: this:
[14:30:35] Mik: aaronsierra47@gmail.com
[14:30:46] Imba Dip: no
[14:30:53] Mik: yes it is
[14:30:59] Mik: you've already chargedback
[14:31:00] Imba Dip: like i said, does your crypter work?
[14:31:04] Mik: also you've made threards
[14:31:08] Mik: yes it does work fine
[14:31:09] Imba Dip: that's not my email.
[14:31:13] Imba Dip: not it doesn't.
[14:31:18] Imba Dip: then address the issue i posted
[14:31:32] Mik: okay
[14:31:35] Mik: no refunds anyway
[14:31:40] Mik: anything else i can help you with?
[14:31:45] Imba Dip: ok i will charge back and post this on your thread
[14:31:49] Imba Dip: bye bye
[14:31:50] Imba Dip: scammer

Hey, I've a question about the FUD.
How can Windows detect it while AVs can't? I tested a server on another PC, and it doesn't pass through the firewall btw, is there any solution?

You can tell this crypter doesn't work when his signature is a redirect to a NEW crypter by him, starting at $25 a MONTH. This shit doesn't work or doesn't get updated anymore cause he'll be putting his effort towards a new crypter.

New crypter? You mad?? That's version 3 and I had that signature for ages. Diversev3 has been since version 1 which you can find trough my thread dipshit. Been online over 2 years this is a basic crypter with basic features don't bother sales trashing me if you don't know shit.

You can choose another payment such as BTC/LTC/PM/OMC!

Maybe I'll re-enable, too many chargebacks can't be bothered dealing with skids wanting free shit these days...

And daily scan as always :

Alright! Just bought the lifetime licence for this crypter. And coming from a newbie who has never used a crypter, I looked at the user interface, found my way around, and it turned out to be very easy to use. Thanks Miki! Vouch for him!

Kilikian_Arch - *June 11, 2015, 6:11 pm*

hey buddy I wanna buy it using paypal, I don't know what I have to do to assure you that it's going to be paid with my own money and account, I can show you purchase history and the email address also my ebay which is connected to my paypal account or any other that will please you and make you certain, I seriously need this.

Please be patient believe there is a problem with the payivy delivery service, and payments not going through or being stopped for some reason, going to check it now, please don't post anymore I am aware of this. Will pm you license details/tell you check inbox/junk of email you payed with once I've sorted this problem out!!!!!!

CloudHub - *June 14, 2015, 3:07 pm*
i ordered again and it still says that waiting for the reciver to accpet payment ffs
okay sorry only just read now
i have paid waiting for you to accept it do asap need program

Like I keep saying, this ain't a support thread.... message me to get help....???

ExterseFromTheBlock - *June 17, 2015, 11:51 am*

When is the crypter gonna get updated?!

is0t0pe - *June 17, 2015, 12:22 pm*
Any updates on it's compatibility with njrat? Would like to buy but I'm seeing reports of it not being FUD and njrat not working with it.

Miki - *June 17, 2015, 2:16 pm*
Njrat should work now, please check the .net x86 setting for it to work, if there still is an error please message me rather than posting here... also refud has been done too.

Puncake - *June 18, 2015, 6:02 am*
Bought $15 deal, never got link. Please help.

AsikkRyu - *June 18, 2015, 7:44 am*
This looks really good i plan on buying the lifetime package later 2day.

Stained28 - *June 18, 2015, 8:23 am*
Very good crypter would recommend it

Wake - *June 18, 2015, 1:59 pm*
Really good crypter been using it for a while now would recommend

ExterseFromTheBlock - *June 18, 2015, 2:28 pm*
Great crypter! 100% FUD. Definitely look into buying this guys.

Miki - *June 18, 2015, 3:25 pm*
newest refud and scan for you, please do not spam any other comments, this aitn support thread, i will not support you here, you will be ignored here unless you pm me or as me for skype/other means of contacting me

Great and cheap crypter! Working with Nanocore
Working settings for Nanocore RAT:

NanoCore:

DiverseBasic:

Indus - *June 19, 2015, 9:46 am*

This is the best crypter i've ever had.
I am using nanocore and when i crypted its like 4/35 and i haven't yet used icon,junk code & encryption.
Link : http://www.refud.me/results.php?id=1wmbnbqaz5o6tvi4q3hu6ypubql4amx2fe3
Its the best crypter you can have at such a lower price just go with lifetime option its just 15$.I bet you won't regret.
Keep it up OP.
If you want i can wear out your signature for free.
Final words : cheap yet best and it is underrated.I would recommend this to my friend
Ratings : 10/10

Edit : i just saw it has a scanner also

Hey bro, i set up all the settings but after i press crypt, it pops up a autoit program asking me to convert a .au3 into exe or something, i don't understand lol.

Changed the icon with ResEdit instead of diversecrypter due to this issue^

also 1/35

Sorry about posting this on here, i'm actually asking for help.
I did fix the issue by not giving it an icon.

Also I can't PM anyone because I don't have enough posts, hence why i'm posting here.

I have many question diverse crypter v3 montly 25$ but this 7$ what is the difference

JiZZBERG - *July 8, 2015, 7:27 am*

Hey man.

I have one question. How can i make the stub dont plop up as "net.exe".
If i just delete the net.exe in the taskmanager, the virus is deleted ? Because the PC isnt connected anymore and dont come back ?

BTW ITS A VERY NICE CRYPTER. Easy to use and FUD !! I just got some problems :S

Just bought a package and here is my review.

1. Once I crypted the file and I test it, it doesn't connect to my botnet.

2. Isn't even crypted, when I try to upload it to a webserver , the website detects it

https://i.gyazo.com/a74f618da2f6ed6f8eb4b39037f4e13a.png

I also asked the owner if it will be fud and work for my botnet and he said yes, money wasted and smart tos "NO REFUNDS"

Sorry but this crypter is not good ... I can click on every function and nothing change. If a other one or me wants to delete the virus just go to the taskmanager and look for "net.exe" delete these and

finish. You are done the virus is deleted (You cant do anything with spy softwares). This crypter is buggy as hell or dont working sorry mate ..

4/10

Horrible crypter don't waste you're time. This guy is a total dick.

He will call you an idiot/moron and all kinds of names if you ask for help he will tell you hes busy.

Takes hours to respond. I have logs to prove and i will gladly post it.

Edit : Neg reps me. Just because im a newb and learning you don't have the right to insult me im a fcking customer fucktard.

Sec i will upload screenshots.

Probably get locked, if you keep uisng diff ip's and netseal will lock it.

I will unlock it asap if you want but you have to msg me via skype.

okay I'm just gonna try and remember to disable my vpn when I want to use this program so I save you the trouble for doing so, but if it happens then thanks in advance.

seriously if people are looking for a cheap and good crypter this is it, I have no problems what so ever, and this is my first crypter. I just wanted to say this because so many bad comments and so few good. I really don't get why there isn't more good comments. Miki you really deserve some good comments too it's working as it should and some people just don't know how to use it and/or their own software.

Pretty much yeah, competition in this section.

DamienVC - *July 21, 2015, 5:43 am*
Dude, I wasnt spamming, lol. I asked a legit question regarding the product, because the 700kb stub caught my eye. No Dependencies = AutoIT..?

Also the 1rating isnt any "competition", its a base for jealous competitors to berate you, but eh, it isnt that useful anyways.

Ah anyways, the crypter had a AutoIT3 stub as I assumed.

?

Yeah I know but I had the same with the others selected, I just took a screenshot of the error because I was trying to let it show up again.

However I think I fixed the issue it was by selecting random stuff from the main tab and then the encryption key.

Never its a basic crypter, the idea of adding a .net stub was at the beginning of this crypter but I've changed my mind and despite having a small stub I'd rather not mess around and keep it auotit only. ?

When will it be FUD ? Or are you going to show a proof that binder is working ? Because I have never managed to make it worked. Tried all the operation systems, all the applications. It's not working.

Your .net program you trying to bind does not work with my binder, because of your horrible knowledge in c#....

binder works fine, like I said fix your shit before having a go at me thanks.. ?

Mr.Untrackable - *July 25, 2015, 1:29 pm*

binder works fine, like I said fix your shit before having a go at me thanks.. ?I have tried many C++ and C# applications with your binder. But none of them worked. They are not all coded by me. And the crypter is still not FUD with HQ icon.

I received my crypter and all is well now :) but I was wondering if the binder works with images? I tried it and it still gave me the default icon after crypting. ?

P.S. Can we talk on Skype or something? Now I am getting errors and it's just not crypting my stub now.

No sorry, that wouldn't be fair on the other customers. You can purchase 1 month to test then lifetime if it suits your needs.

Find stb.au3, it's normally in AppData or Temp, and move it in the same place your Diverse Basic is, then try it.

Dont working :(

I realy want to crypt the file , and i bind it with other file

bossen1000 - *August 3, 2015, 5:40 am*

The crypter corrupts my server, even tho i have injection ticked off on the crypter.
It still injects into vbc.exe which causes two cmd's to popup and ruin it.

Please fix the crypter and i told you on skype too but no respond.

Trips - *August 3, 2015, 6:13 pm*

Does this make the File fully undetectable?

ODTK - *August 3, 2015, 7:35 pm*

Just bought your crypter lifetime version for 15 dollars, and it is NOT FUD. Why is this? I have PMED you about this, and am currently waiting for a response. Hopefully we get this fixed.

Ordinarily I should be able to rename an exe file to scr without spoofing, screensaver files are executable too and it should work without using a spoofer, this can be done on other crypters I have used in the past.

I don't know how people trash this so much I crypted DarkComet with this 0/35 ... People don't know how to use HQ Icons

EmTea - *August 6, 2015, 4:35 pm*

Ya I fix my problem. My icon was fucked and that is why I was getting an error lol. Anyway it seems to work well now. I would recommend trying it for $7 if you need a quick crypter for a file or two and don't have a lot of $.

Liked I said millions of times, yet they still post shit on my sales thread... ???

akaCollat - *August 6, 2015, 7:34 pm*

does this work with CyberGate? if so what settings?

Unrealblaike - *August 6, 2015, 8:39 pm*

Vouch, great product been using lifetime basic for a few months as i do not need a lot and it does the job, updated often.

I just updated to windows 10 and lost everything and he gave me a new exe no problem

I got the executable but now my license wont work because it said its already in use by me and he is ignoring me when i asked for a new license to use the product i paid for!

Thank you very much sir.

Please stop posting problems this is not a support thread...

I'm afraid the 1m license is 7$, the lifetime is 15$, lowering the price just for you would not be fair for my customers.

Avast detects it with deep screen so keep that in mind. Also MS sec essentials detects it sometimes so make sure your host doesn't have it installed. Also, it's not FUD. I crypted a clean file (7-zip) and it got detected but it's not detected by any major AV so you should be fine for that...

Don't u feel a bit responsible for selling this to people that misuse this?
Imo u should put antirat/bot protection - So it cannot be used anymore for malicious stuff.

please kindly let me know if this is working with Knight logger?
Yes works fine with that logger, you'll need to tick .net x86 in the settings.

There are settings for nanocore on post #1 under the sales thread.

sapito08 - *September 14, 2015, 8:21 pm*

hey this seems pretty good i have some questions:
1) when you say life time license you mean that you going to support the crypter to be FUD,
and we going to be able to update to a FUD version wen the actual get Detected?
2) if i buy it for 1 month and create my server (stub) and already have connections with a rat or etc.
when the license ends my server wont connect any more?
thanks.

REVIEW

At first this crypter didn't seem the best, it had a few bugs with when I tried to start the crypted stub. Turns out that it was just my settings that I used with Babylon. This crypter gets updated almost every day making it FUD for %99.99 of the time. Also this crypter is very cheap but if you want something more advanced then go for the OPs Diverse crypter. Rate: 9/10

don't buy! he's unwilling to give support.and yes - this is really one of the worst crypters available. and most of the time it is being leaked right after he releases new stubs. guess that says enough about the overall quality of the "crypter".
oh, and his antivirus reports are fake most of the time.

You need to enable .net and disable the "melt" function for it to work properly :)

I was thinking of buying this as a backup to my main crypter.. With luminosity on my main crypter it will mess up the autoit if I use the ring3 rootkit with LL. Maybe that is the issue sometimes with the Luminosity stubs being corrupted? If i could try it out and see if it works right that'd be cool. ^_^ i could even do some support after i use it for awhile.

When i start it, Diverse Basic 1.0 starts and doesn't work (Detections: 0/0)

The Crypter is at version 1.0 and i dont know how to update.
Scanner works fine if you having an issue try free scanner at www.refud.com

Also diverse Basic is always 1.0

Hey I have some questions:
1) I saw that you have an advanced version of this crypter on the diverse website diverseproducts.net i can buy from that page is trusted?
2) That one Still FUD? "the advanced one"
3) the client machine should have those dependencies ".NET 2&4.0" if not it wont work?

thanks.

1.) yes.. because that is my website which will lead you to payivy for the autobuy.

2.) both are refuded daily as customers prefer it that way.

3.) it doesn't have to be dependent but if it requires .net support it will work..

Use startup in the crypter, not im4, make sure you have .net (managed) ticked on the crypter.

Hi guys,

At the beginning thanks mikki for the crypter. Please tell me, i am doing something wrong or just its

like it is cuz im a kinda newbie.

I make basic server, have successfully crypted it with your software, refud says its clean on ESET, tu my suprise it says its clean on 34/35 besides dr.web, but afret putting it on a computer with an ESET NOD 32 it deletes it and verify it as a backdoor.

Im using nanocore.

Thanks again for the crypter, i hope it will meet my expectations.

Because when you scan it on refud.me it's a scantime scan. Basically if you right click on your .exe and choose scan with eset it won't detect but when you run it it will..
So try to add a delay to the server, it usually helps..

Thanks thejoker0 for the advice, unfortunately it doest work either. I set the delay in nanocore and in the crypter but eset still detects it.

I'm new to crypters and I'm wondering on which one to get.. this one or a different one I saw. I have a few questions though :)

1. Just to make sure.. it's FUD for at least a day? If not, how long?
2. Is it FUD during runtime?
3. Is it optimized for Dark Comet?
4. Is it FUD during scantime?

I'm considering to purchase this item after the $60ish dollars I made off of CSGO skins.

Even though my vouch means nothing I would like to say this crypter is AMAZING for the price. I have bought other "lite" crypters and they dont compare. The only downside to this crypter is the stub size is a little larger but I dont think that is a problem. It gets updated often and the detections it does get aren't major. The best part of this crypter is I dont get an " Im going to update it tomorrow"

every day for two weeks. The one time I needed help, Miki got back to me really quickly. If you want a cheap crypter that actually works look no further. I cant wait to try diverse crypter if the lite crypter is so good.

- Awesome price
- Daily FUD
- Nice features for lite crypter
- No excuses
- Good support

I have bought other "lite" crypters and they dont compare. The only downside to this crypter is the stub size is a little larger but I dont think that is a problem. It gets updated often and the detections it does get aren't major. The best part of this crypter is I dont get an " Im going to update it tomorrow" every day for two weeks. The one time I needed help, Miki got back to me really quickly. If you want a cheap crypter that actually works look no further. I cant wait to try diverse crypter if the lite crypter is so good.

- Daily FUD
- Nice features for lite crypter

Nice crypter. Good support, how do we upload it to mediafire and stuff tho when we can't change the assembly? Chrome will always block it.
EDIT: Don't buy this crypter if you wanna go with mass spreading. You can't change the assembly. Which means you are not able to upload it on any site on google chrome. So you will only be able to spread it through for example: Skype.

Yes it is both runtime and scantime fud.
I do daily refuds as some customers prefer that.
And yes blocked by chrome but like all exe files crypted or uncrypted will get blocked. I'd advise to use either www.ge.tt or www.sendspace.com

I purchased lifetime yesterday but I am getting errors..

When I try to crypt with the recommended settings for Luminosity I get a error box with the following content:

Title: "aut2exe error"
Content: "Error adding file: netdata.bin"

Thank you for the support
Same guy from post above, now i get a different error:
Error adding file: net.exe

What dependencies do I need as I have like a zillion ms redistributables installed... (well 10 actually)

Hi! Quick question: If they run the crypted stub once as Admin, will I have admin priveleges forever?

Another question: Is there a way to disable UAC without them noticing or is it possible to disable UAC for one specific application?
Last question: If none of the above is possible, will the original stub name show on every boot?

Thanks in advance from already paying customer :)

(Jan 2, 2016 06:04 PM)Vault-tec headquarters Wrote: [CITE] Same here for a new fud just a bit ago it's gotten detected super quick someone had to scan on virus total
I keep trying to refud it and the absolute best I can get is 8/35, it also could be other kids downloading the file and scanning on virus total to see if its safe but that's not likely as really the majority of people who even know about virustotal are the ones creating the files that arent supposed to be scanned on there.

thedude2000 - *January 3, 2016, 12:43 pm*

I suggest the OP writes in big fat letters on the first post which scan sites are allowed. All the others excluded in the list are NOT.
So that everyone knows.

Most ppl should know that virustotal is a nono but there are still some peeps who do that.

And just to add it here: If you check the files locally on your pc with your AV make sure you set it to no distribute/upload. Some do if their heuristic scan finds something fishy but its not in their db yet.

Why appear this error?

"Loader Error"
Unable to continue due to an error. Exception written to 'loader.log' file.

I've internet connection, I tried also with a different connection but appear same error.

Make sure your AV is off while using the crypter.
It writes temp file somewhere which might get picked up by the AV.
If it gets deleted it doesn't start

I understand...I'm going to buy this tomorrow and hope that it will be a bang for the buck...A few questions only :

1) Will I be able to use the licence in more than 1 PC I personally own ?
2) In case I can't...can I transfer the license with ease ?

You can only use 1 license per pc/per user, if your license gets locked it's either due to the new machine change or an ip change.

There is no license transfers, but if you using new pc, your license gets blocked, I'll unlock it for you without any problems.
