Thread: [Introduction to Computer Security](#)

System Analyst - February 23, 2015, 9:59 pm

Hey HF, I'm new here & wanted to learn more about computer security. I plan on majoring in IT this semester & wanted to get a head start. I have some experience with C++ & local/wifi/ethical hacks & I am familiar with servers. What do you guys think? I am also thinking about running Kali (unix) off a USB to get familiar with security operations. Thanks for your time ?

I look forward to seeing you there!

System Analyst - February 23, 2015, 10:05 pm

Thanks for your reply, although this is not really what I was looking for, I am already familiar with malware & the removal of it. I'm looking for more in depth security such as servers & kernels.
