Thread: [Most effective attack method](#)

Mr. Gotti - February 24, 2015, 12:02 pm

I was curious what everyone's thoughts were on the most effective stress test? I would like to know what you think is most effective for home connections and then most effective for websites. Let me know. Thanks for your time.?

Enter Down - February 24, 2015, 12:09 pm

methode use TCP :)
hehehehehe

NigLip - February 24, 2015, 12:19 pm

Walking into the place with a large hammer always seems to be a better job than ddos. lol

?•?•? - February 24, 2015, 12:28 pm

Home Connections = UDP/TCP
Gameservers = Mainly TCP based methods, as some of em bypass protection.
Websites = Layer 7, Joomla works good.

raxxor - February 24, 2015, 12:34 pm

DRDoS UDP Amplification attack i find it unique and effective.

Is this only possible from linux servers that can access raw sockets or is it possible via a C program on a windows machine?
