You are so fucking stupid. Any server offering currency spoofing does not work properly. The download will fail to save at 99%

I never said you would if you reread that it was me predicting you saying some dumb shit like this post im quoting you retard i was telling you to fuck off with your negativity so fuck off ?

plus mr kk my code isnt stolen som e of it if you can say that was recycled and is being rebuilt with different implementations so once again main point fuck you you dont help any one in this "community" anyway

PS why even call it a "community" ?

Do you know what the word even fucking means?

A community is a group of any size that shares common values derived from the Latin *communitas* (from Latin *communis*, things held in common), a broad term for fellowship or organized society. One broad definition which incorporates all the different forms of community is "a group or network of persons who are connected (objectively) to each other by relatively durable social relations that extend beyond immediate genealogical ties, and who mutually define that relationship (subjectively) as important to their social identity and social practice."

none of the fuckers in this community want to help have anything in common any of this shit every man for himself survival like shit...

doesn't deserve to be labled as it is disappointing ass shit..

i have nothing in common with you as apparent as that is...

xbl zone. its \$200 lifetime. I've used it before and my kv lasted weeks?

javie - February 28, 2015, 5:25 pm

XBL Zone has MSP spoofing. That's what I personally use, haven't seen a problem yet I download content completely fine. I believe this is for games only though.
