Thread: [Free Rat w/ paid crypter or Paid rat with crypter](#)

DaRealMVP - February 25, 2015, 8:26 pm

I Bought NVPN for 3 months so it fixed all my portforwarding issues,

I tested it using darkcomet works perfect, but i think darkcomet isnt really good cause its buggy, remote desktop screencapture doesnt seem to work...

Anyways my next step is god get a god FUD Rat.

Any recommendations?

I want one with a keylogger, but most importantly i need it to be FUD

I have been looking into XENA 2.0 With the crypter... [20\$ I think for life time or something close]

but it isn't FUD and has detection rate of 4/42 or something... So i dont understand the need to pay 5\$ extra for a crypter which wont make it FUD maybe it was FUD initially but isnt now and maybe a reFUD is in process anyways....

I dont want to spend much cash i already bought 12\$ nvpn and wasted 10\$ on galaxy keylogger which was ok but the user sucks in supporting customers and fixing bugs...anyways lets not get off topic.

Should i get a free R.A.T and spend money on a Crypter?

If yes which one should i get?

If No which paid R.A.T has a crypter and is good and resonable overall?

Sorry for the brief post, any help is greatly appreciated ?

EDIT [MY FINAL RAT SETUP](#)

brantforg - February 25, 2015, 10:44 pm

Paid Rat with Paid Crypter is the best!

It isnt useful to have a free rat which isnt working but get it FUD.

And also to have a good RAT but dont get it FUD.

Try to get RAT and Crypter with Lifetime License so you have to purchase only once

Pernille - February 25, 2015, 10:50 pm

If it had to be one of the two... I'd get a paid RAT and get it crypted here.

DaRealMVP - February 25, 2015, 10:54 pm

(Feb 25, 2015 11:50 PM)Co?de Wrote: [CITE](#) If it had to be one of the two... I'd get a paid RAT and get it crypted here.

Thanks for the quick replies....

Any recommendations?

NoodleBot™ - February 25, 2015, 10:55 pm

Free R.A.T + Paid Dedicated Crypter

Why pay for a RAT that most features you will be disabling anyways, (when crypting it)

DaRealMVP - February 25, 2015, 11:14 pm

(Feb 25, 2015 11:55 PM)NoodleBot™ Wrote: [\[CITE\]](#) Free R.A.T + Paid Dedicated Crypter

Thats what i was thinking too, any suggestion for a good free R.A.T?

Does it matter if it has a 10+ / 57 detection rate if i use a paid crypter?

e.g dark comet has 50/57 detection rate but is old and i think not wise to use now...

and What functions would a crypter disable?

NoodleBot™ - February 25, 2015, 11:17 pm

Darkcomet works fine. You need a crypter. Darkcomet will naturally always be detected.

You crypt the files regardless. You worry about the crypter being detected, not the raw stub before crypting.

DaRealMVP - February 25, 2015, 11:20 pm

I tested darkcomment without a crypt unfortunately i think many tested it on virustotal making it detected...

Anyways can you link me the latest updated version of the R.A.T.

EDIT:- FTP delivery doesnt seem to work too well with my version V5.3

NoodleBot™ - February 26, 2015, 12:55 am

5.3.1 is the latest and last version made. Can post walkthrough link later when on a computer or you can look through my threads for it.

DaRealMVP - February 26, 2015, 1:02 am

Found it thanks

[Rat setup](#)

I made another thread on my final rat setup options please do check it out and share your valuable opinion.

Thanks

Infinity. - February 26, 2015, 1:05 am

You find the RAT with no dependencies buggy? Strange.

DaRealMVP - February 26, 2015, 2:00 am

(Feb 26, 2015 02:05 AM)Infinity ? Wrote: [\[CITE\]](#) You find the RAT with no dependencies buggy? Strange.

By "buggy" I mean it was extremely slow whilst remote desktop when the desktop display quality was set to low/worst.

And also it didn't send logs to FTP when i tried logging in gmail via google. And i use a paid vpn server so i should be receiving it fast.

Am i doing something wrong? or is DC always like this cause its a free rat.

Lerio - February 26, 2015, 4:07 am

I would never pay for a RAT.

There are so many RATs for free and has always been so, why pay for it?

Use Darkcomet, njRAT, Spynet..

than buy a good crypter for 35\$ and you are good to go

DaRealMVP - February 26, 2015, 4:59 am

I don't want to buy a rat but when i tried DC for remote control its was extremely slow, and that laptop was right next to me.

Could it be that it was slow cause the laptop was connected to my computer wifi? and i use nVPN when DC is turned on. so it was connected to my VPN server and not wifi.

I want to buy a rat because of 'live remote control speed" bascially its like controlling another PC as if it were your own. That fast. If there is anything which is fast enough and free PLEASE DO TELL ME

Vuln - February 26, 2015, 5:10 am

(Feb 26, 2015 02:05 AM)Infinity ? Wrote: [\[CITE\]](#) You find the RAT with no dependencies buggy? Strange.

Nativeness doesn't mean jack shit. On top of that, DC was quite poorly coded, with today's standards in mind.

DC shouldn't be that slow. What do you consider extremely slow anyway?

Slow WiFi or VPN speed sounds more likely.

Sacred Symmetry - February 26, 2015, 5:15 am

Xena rat is amazing. Use it and i can definitely recommend it.

DaRealMVP - February 26, 2015, 5:21 am

Slow WiFi or VPN speed sounds more likely.

I have a fast internet connection but i'm not sure if the speeds get affected whilst using a VPN. I guess if my laptop is connected to my pc via wifi it should connect to my vpn and not the normal internet, right?

i'm not so sure how it works...

And by "Extremely slow" i mean the server taking about 20-30s to get a "click" or select a folder on the desktop and bascially 30sec+ to open the folder.. that tooo at LOWEST quality settings.

Is it a problem cause my laptop is connected via wifi? and i use vpn which makes it all the more slow

(Feb 26, 2015 06:15 AM)?Google Chrome? Wrote: [\[CITE\]](#) Xena rat is amazing. Use it and i can definitely recommend it.

I am currently tied between the new Rats NanoCore, Imminent Monitor and Xena

What i want is Live Remote Destop Speeds [Fast Remote controlling]

and a keylogger, nanocore seems to have a multicore pluggin which can be downloaded which adds the feature to retrieve any passwords from browsers and clients... ik a keylogger does it but thats an added feature.

So i most probably will be going with Nano Core or DarkComet if its speed its satisfactory in remote desktop as for my Crypter i'm not so sure.

20-30s is abnormal. You should try infecting a machine on your LAN with your VPN enabled and then disabled, just to see how much of a speed difference it would be.

DaRealMVP - February 26, 2015, 5:52 am

Ohk, whats the normal speed? problem is i cant port forward without nvpn, i tried for one full day.

My Network setup

Quote: 2520 U Dlink modem + DIR 600L Dlink router

I tried everything simple portforwarder and also opening manually via my router, changed to static. i cant open manually via modem cause it doesnt have the feature its missing in the settings.

any other way to check?

Vuln - February 26, 2015, 7:03 am

What's "normal" completely depends on your own connection (WiFi+VPN), your client's connection/location and (to some extent) how the RAT was coded.

DC may not be the fastest and most modern RAT, but there's no reason for it to take 20-30 sec for a single low quality screenshot to arrive, without a major secondary factor heavily slowing it down.

After you forward a port, what does <http://canyouseeme.org/> say when your RAT is actively listening on that port?

NoodleBot™ - February 26, 2015, 11:51 am

^ Correct. The speed of how your RAT functions is based on your network/connectivity.

This is why other people decide to risk more, but use botnets for a faster connection to their slaves. However, this is mostly used for monetizing with DDoS attacks, ad clicking and traffic redirecting, etc.

If it's taking ~20-30 seconds, either you have a slow connection, or your slave has a slow connection.

DaRealMVP - February 26, 2015, 7:59 pm

That "slave" is actually my other laptop connected to my wifi. So i think that should be the reason cause i have a fast connection and no reason to take so long if the other laptop is in the same room as me

(Feb 26, 2015 08:03 AM)Jailbyte Wrote: [\[CITE\]](#) What's "normal" completely depends on your own connection (WiFi+VPN), your client's connection/location and (to some extent) how the RAT was coded.

Yep i checked on that website doesn't show a positive message. i get connection time out everytime. i tried turning off my antivirus and firewall

Yep most probably going to go with that.
Any recommendations on a Crypter?

Kill?Muvz - February 27, 2015, 2:11 am
Cryptex Reborn all the way. If you read some of the other thread you will see everyone recommends it :)

PM me if you want a good deal :)

DaRealMVP - February 27, 2015, 2:34 am

Sounds great, but it may be too costly for me.
I'm looking for life time license and i dont wanna buy a Rat so ill just be using DC

Right now the orion crypter Life time price of only 35USD is really appealing

Kill?Muvz - February 27, 2015, 3:32 am
please clear your PMs mate, I can't pm you

DaRealMVP - February 27, 2015, 4:41 am
Bought the crypter from KillaMuz ?

So far it is FUD works perfectly fine.

and got a great deal for 6 months :)

Ainan007 - February 27, 2015, 5:38 am
If you want HQ Remote Desktop then buy
NanoCore it's the best RAT on HF + upon purchase you get a warranty if 7 days, if you change your mind you will get a full refund within those 7 days

NanoCore is stable,fast, and has a decent amount of features with Active plugin developers
For a crypter I recommend Cryptex Reborn
It's 20\$ and has the longest time FUD with a record of 1 month

DaRealMVP - February 27, 2015, 5:49 am

Idont care about FUD anymore i got a kick ass FUD cryptor for 6 months
Cryptx Reborn. Problem with Paid rats are users can get apprehended if any one of those users

gets involved in some malicious activity

Was talking about the Rat not crypter.

Energy1218 - April 22, 2015, 7:21 pm

Did you know theres alot of free VPN out there lol no need to buy one!

SourMan - April 22, 2015, 8:55 pm

Grow some balls and use Darkcomet or njRat with a cheap paid crypter like razor Crypter V2. I am using a DC and Razor crypter combo and I managed to get some nice Steam accounts..

DaRealMVP - April 25, 2015, 5:14 am
