Thread: [My Rat Setup: Is it Good?](#)

DaRealMVP - February 26, 2015, 12:41 am

So i did a little research and came up with the following two option:-

OPTION 1

Quote:Imminent Monitor + Orion Crypter = 60\$

Option 2

Quote:Dark Comet V5.3 [Free] + Orion 35\$ = 35\$ [Already purchased 3months nVPN]

P.S i Got 3 months NVPN already. so i spent another 12\$ on that ? And the Crypter i have not confirmed on yet

So now it boils down to whether i actually need a paid Rat. I'm still a student in Uni so i dont have excess funds to spend ?

Anyways I dont wanna do anything blackhat like stealing Credit cards/Paypal or any thing to cause serious damage. I just figured out a pretty new exploit i should say to make some cash but ill need the right tools.

So heres my question. Do i really need a paid Rat?

I'm buying a cypter either way so it will be FUD most of the time. And maybe i wont be in need of any "extra" features a paid rat like imminent monitor has to offer so any experienced blokes out there please do suggest whats the best course to take.

P.S If you have had any issues with the RAT or Crypter before please do address it.

NoodleBot™ - February 26, 2015, 1:10 am

The difference in paid and free rats is that the old have older but reliable methods of Code and vice versa.

The newer rats can offer things like faster remote viewing and some features that aren't typically on things like Darkcomet (miners for example). However even these things can be supplemented with its own builder and then downloading the file onto computers through the rat.

If your just looking for the average experience, and probably what most monetizers and "professionals" are using, then stick with the free ones.

Unless your method of obtaining information requires something that one of the paid ones offer, don't bother.

For another major privacy reason, I will post later when on a computer.

DaRealMVP - February 26, 2015, 1:36 am

OK Thanks I will be waiting. Once again thanks for your support.

If this plan is successful and I make some good money ill make an eBook and give you a vouch copy to review. So far i'm pretty sure this method will work and im sure it isn't saturated or even semi saturated.

I will keep tweaking about with the RAT settings to see if it works best for me.

Anyways if you have the time do PM me on Skype. i forgot my Skype id but pm me yours and i will add you

Vuln - February 26, 2015, 5:26 am

For the best execution rates you'd want to use a native crypter (unlike Orion) if you are going to crypt a native RAT, I hope you realise that before buying one.

I couldn't agree more.

SIM-2198759 - February 26, 2015, 5:28 am

For rat client it depends, are you just aiming to get windows machines or most/all types of machines? (Linux/Mac ect..)

DaRealMVP - February 26, 2015, 5:36 am

(Feb 26, 2015 06:28 AM)?SUP3RD3AD Wrote: [\[CITE\]](#) For rat client it depends, are you just aiming to get windows machines or most/all types of machines? (Linux/Mac ect..)

A universal compatibility would be better,

I see i did contact OP to clarify if it works well with DC and they did say its fine with DC, ?

Anyways the only reason i wanna buy a rat is because of the sluggish remote destop control. It takes 30secs to get a selection Mark on a folder after i clicked on it via remote control.

One thing i think may cause this slow speed is the fact that my laptop is connected to my pc via WIFI. And when DC is on i use nVPN which could be slowing my internet speed down i'm not sure... what do you think?

What do you mean by that?Quote: However even these things can be supplemented with its own builder and then downloading the file onto computers through the rat.

Vuln - February 26, 2015, 7:23 am

(Feb 26, 2015 06:36 AM)amandawuvu289 Wrote: [\[CITE\]](#) A universal compatibility would be better,

Very well possible, but that would severely limit your RAT and crypter choice.

(Feb 26, 2015 06:36 AM)amandawuvu289 Wrote: [\[CITE\]](#) I see i did contact OP to clarify if it works well with DC and they did say its fine with DC, ?

I'm sure it works well with it, but it would add .NET dependencies to an otherwise dependency-less RAT, limiting you to only infect computers with that specific .NET Framework version installed (which includes most systems, but is still worth noting).

(Feb 26, 2015 06:36 AM)amandawuvu289 Wrote: [\[CITE\]](#) Anyways the only reason i wanna buy a rat is because of the sluggish remote destop control. It takes 30secs to get a selection Mark on a folder after i clicked on it via remote control.

See my response on your other thread.

I don't think that would cause a huge delay. Why not directly connect to your network anyway?

Lerio - February 26, 2015, 7:26 am

Just go with Darkcomet/njRat/SpyNet. It has everything someone needs. In a way everything a RAT needs is a File Manager. If you have a File Manager you can upload and execute everything you want.

Your RAT has no built-in Keylogger? No problem, just upload one.

Your RAT has no password recovery? No problem, just upload a recovery tool or download the password file and open it on your computer.

Simple as that.

Just bought Orion Crypter myself. I hope it works well.

NoodleBot™ - February 26, 2015, 11:54 am

For the privacy mention I reasoned later;

Paid RAT's will provide you with a username that is linked to your payment information.

If you or the RAT owner were to get apprehended (or let's say the malware author has been in some trouble, get's his product raided) his database will have your payment information + username + logs of actions you have done, times you've logged in, how many times, how many IP addresses you've used, your HWID, etc. Tonnes of info.

Now... This is less likely to happen to a crypter, so by paying anonymously or trading for a license you can safely avoid all this risk and trouble from using a paid RAT.

Remember BlackShades? Probably not.

Quiet Assassin - February 26, 2015, 12:38 pm

Here's the thing, paid rats are decent, but personally I think darkcomet is perfectly ok. Investing in a crypter was a smart choice, you'll need that. Also a vpn was a smart choice too. Setup 2 is the best choice?

Ainan007 - February 26, 2015, 1:47 pm

Oh snap :o

Does that apply if you pay in BTC?

TacoTejano - February 26, 2015, 2:51 pm

Oh wow thanks and i dont plan on doing anything black hat like stealing cc cards, just exploiting a situation that hasn't been paid attention to ?

But i'll take your advise and stick with dark comet, i belive the slow speeds were because of my laptop being connected via wifi to my pc.

And when dc is on nvpn is on which porbably slows my wifi speed all the more.

(Feb 26, 2015 08:26 AM)Lerio Wrote: [\[CITE\]](#) Just go with Darkcomet/njRat/SpyNet. It has everything someone needs. In a way everything a RAT needs is a File Manager. If you have a File Manager you can upload and execute everything you want.

DC Is only for windows, if you want to infect multiple Operating systems Java is the way to go.

I dont want to spend much on a rat, Is the free version good enough?

Any other cheaper versions with cross platform feature?

<https://jrat.io/>

Is that the official site to download jrat?

When i run the builder i get that error

invalid argument length: 0

The free one is pretty good, i usually use it as a foothold because you can't really get passwords or a keylogger ect.. then just upload and execute a stub if i have a windows client online (Adding them to njRAT until i get jRAT pro and IM3)

I don't know about cheaper ones, you could look here: [Full list of Free and Paid RAT's](#)

Yes that is the official website for jRAT ?

To open the builder do this:

This is a very good point about paid RATS. Haha I remember blackshades. That was the #1 paid RAT on HF for a while, then owners & users got raided by the Feds. ?

DaRealMVP - February 26, 2015, 10:31 pm

(Feb 26, 2015 11:15 PM)System Analyst Wrote: [\[CITE\]](#) This is a very good point about paid RATS. Haha I remember blackshades. That was the #1 paid RAT on HF for a while, then owners & users got raided by the Feds. ?

Yep thanks to that i'm not gonna buy a rat however fast or cheap it may be, i dont wanna get raided by fbi agents and my stuff taken away ?

So buying a crypter is safe right?

I dont think i will be doing anything blackhat but the method i will use to make money wont be stealing accounts either but it should work and isn't legal or illegal ?

It's just not paid attention to by people and worst case scenario i can get a ban ?

So Orion crypter + Dark comet ill stick to windows OS :)

EDIT* i tried running DC on my laptop conected via ethernet cable but it was faster this time but not very stable... no crashes and all but on lowest quality it took around 8 secs to do every task i could open microsoft word and use it.

Whats odd is it stated the computer was US based when it was my laptop and im based in Asia ? Is it cause i use NVPN when DC is on? and the server i use is Austria.

Ping i get is a whopping 322Ms which is abnormal for a computer in the room above me

Jinu - February 26, 2015, 10:43 pm

I voted for the Setup#2. Go with the second option.

Vladmir Putin - February 26, 2015, 10:49 pm

Dark Comet works go with dark comet bitches like dark comet.

(Feb 26, 2015 11:49 PM)Vladmir Putin Wrote: [\[CITE\]](#) Dark Comet works go with dark comet bitches like dark comet.

Fuck darkcomet, that shits so broken and outdated, bitches don't like darkcomet.

System Analyst - February 27, 2015, 5:56 am

Bro buy a crypter you'll be fine, of course your username will still be on a database but a crypter is a crypter & a RAT is A RAT. You'll be fine.

Vuln - February 27, 2015, 6:05 am

(Feb 26, 2015 08:53 PM)amandawuvu289 Wrote: [\[CITE\]](#) So DC doesnt require .net framework 2? thats what no dependency means?

Correct!

(Feb 26, 2015 09:37 PM)?SUP3RD3AD Wrote: [\[CITE\]](#) For it to be universal it would have to be a java RAT (Like jSpy, jRAT ect..), The stubs are normally FUD or pretty close to it but there is a free FUD java crypter [here](#) called JavaProtect.

None of that is true.

Java is not the only language compatible with multiple OS.

Also, a Java RAT doesn't automatically mean that it can infect all OS. jSpy for example, can only infect Windows as far as I can tell. Same rule applies to all languages for that matter. Don't be fooled by misleading advertisements.

Java files being usually FUD or almost FUD isn't true either.

And you should never want to use a free crypter. Ever.

(Feb 26, 2015 11:15 PM)System Analyst Wrote: [\[CITE\]](#) Haha I remember blackshades. That was the #1 paid RAT on HF for a while, then owners & users got raided by the Feds. ?

Its users didn't get raided at all, and its owners were arrested and charged for different reasons.

Buying a RAT is perfectly legal.

ZtecGamer - February 27, 2015, 6:13 am

paid rats are much more stable, free rats can be very unstable such as cybergate

SIM-2198759 - February 27, 2015, 6:32 am

(Feb 27, 2015 07:05 AM)Jailbyte Wrote: [\[CITE\]](#) None of that is true.

Hm what other types of rats can infect other OS's?

I've never used jSpy so i wouldnt know.. I just knew it was java

The stubs built by jRAT are almost UD..

Free crypters are a meh, Im normally low on cash ;_; so i go with free tools at times..

DaRealMVP - February 27, 2015, 7:56 am

So i bought A paid crypter Cryptx Reborn 6 months costed me 40\$ which is not too bad for a dedicated 0/60 FUD crypt and advance features works fine with DC just a few small issues here an there but thats cause i'm mixing up a few crypt settings.

anyways the crypter mystery is solved as for my RAT i get 350Ms ping close to me which is incredibly slow but should be satisfactory. I'm sure its the VPN making speeds slow cause i got nvpn when using DC anyways

other than DC any other stable and better free rats?

Mr. Dr. Prof. Patrick - February 27, 2015, 9:42 am

(Feb 27, 2015 07:32 AM)?SUP3RD3AD Wrote: [\[CITE\]](#) Hm what other types of rats can infect other OS's?

Any RAT that the developer decides to include a payload for the OS, C/C++ can infect any OS if the coder feels like targeting it, like netwire

Malware? - February 27, 2015, 9:52 am

You're asking a stupid question. You have us two situations to pick from. A + C or B + C.

C is in both situations so you are getting C (Orion Crypter) in either situation and A is free..

Try situation 1, if you don't like it then buy imminent monitor... not that hard....

DaRealMVP - February 27, 2015, 11:37 am
