Thread: [Gh0st client m8](#)

tbh1 - February 26, 2015, 2:50 pm

For Everyone asking what a ghost client is I'm going to explain so it's not asked 24 fucking 7....

Ok, let's start with the simple ghost client..

Stage one Ghost client:

This client does not have a gui, and does not have an array list etc (visible hacks/hud) The mods normally contain a trigger bot and sometimes a click aimbot. It's used for shit players to record with and make others think there a god..xD (it doesn't improve your abilities that much)

But, it can be found if asked to go into your versions folder/mods folder..

Stage 2:

Injected client: this one would have all the same features listed above but is almost 100% untraceable.. it is illegal due to the fact you are editing the .jar but Yolo am i right ;D

Now you know what a Ghost client is congrats feel accomplished

Oh god.. My eyes are burning.

I have a ghost client with an ArrayList. I just don't draw it.

It's not at ALL untraceable you fucking meathead.

It's still there in memory, machine code, etc.
