Thread: [How can I change my Mac OSX's mac address and change my IP](#)

redcoke92 - February 27, 2015, 3:23 pm

Alright guys, I want to keep my computer anonymous and cant be traceable. How do I do that on a Mac OS? How can i surf the internet or buy stuff on the itnernet with a diff mac address and ip address?

There are a lot of programs out there but most of them are out of date.

e46M314 - February 27, 2015, 3:38 pm

I saw a really good tut on this let me checkit out and come back

redcoke92 - February 27, 2015, 3:40 pm

Sweet, thanks dude, willing to learn this.

There are a lot of programs out there but most of them are out of date.Are you using your home router for this? Changing your MAC address on your device will have nothing to offer you if you're using your home connection.

I believe macchanger was ported from GNU/Linux to OSX.

With a different IP address? Tor, VPN, SOCKS 5.

redcoke92 - February 27, 2015, 5:42 pm

Yes I am using my home router. I was thinking of something that can cover my IP and MAC address on my Mac OS.

Ill check it out, thanks!

ArchGabriel - February 27, 2015, 5:53 pm

If you want a relatively simple way of doing it, download a Virtual Machine, install a new OS onto it. Then just use a proxy or a VPN. When you're finished, just delete the machine.

redcoke92 - February 27, 2015, 6:57 pm

I see, i get it :) Thank you Arch and Zack.

So..

Download a virtual machine > install OS (changes MAC address > run OS > use proxy or VPN to cover IP address

To verify, this is impossible for anyone to trace, right? If not, what are the possibility of a person detecting if its my computer?

I found a better way. Use Tor Browser guys!
