Thread: [Taking C# requests](#)

caudex - February 28, 2015, 3:46 am

Hey everyone.

Im a bit bored these days. Im offering a free coding-service for small tools (1-2 hours of work max) based on C#.

If anyone got something to code, maybe according to usability with windows or such things, just tell me and I'll see what I can do.

Good-to-know's:

- GUI / console?
- Are there any recommendations required such as a specific framework version?
- Compiled or source?

No-go's:

- Bots required communicating with other applications
- Hacks / Cheats
- Any way of hacking helper

Looking forward for requests. :)

If you have any experience about it, then it would be pretty awesome if you could do a skypebot. So that it can do !resolve (skypename) and then it answers with the resolved ip from an API. :) i've tried a lot of things, but none seems to be working correctly

(Feb 28, 2015 05:33 AM)+Cyan Wrote: [\[CITE\]](#) Then I recommend posting this in the C# subforum. Oh lol. There is a subforum of this subforum. "Hah".

Seriously I searched for something specific to C# for about 5 minutes before I posted this.

I guess its not possible to move this thread by my own hm?

:/

Write a document DB similar to mongodb in .net. Mongo is a life-saver and writing your own version could be extremely fun (depending on how you get your kicks :P)

netowrking libraries are fun too. write a networking lib, heheh

Well that could be an idea. At least I would've been busy for some time. :D

Thanks for this dude.

Can you code me a girlfriend in C#? ?

caudex - March 3, 2015, 1:58 am

(Mar 2, 2015 05:33 PM)Mr. Trvp Wrote: [\[CITE\]](#) Can you code me a girlfriend in C#? ?

Code for(penis=5;penis<20;smack_the_salami())

```
{
    MessageBox.Show("Oh yeah");
    Thread.Sleep(2000);
    MessageBox.Show("Oh Mr. Trvp...");
    Thread.Sleep(2000);
    MessageBox.Show("OOOOOOOh...");
    if(penis<10)
    {
        MessageBox.Show("Cmon bitch! Faster!");
    }
    else if(penis<15)
    {
        MessageBox.Show("We'r getting closer!");
    }
    else if(penis<20)
    {
        Debug.Write("You feel pretty well!");
    }
}
MessageBox.Show("Im done");
PenisObj.Dispose();
Like that? ?
```
