Hi all.After learning some batch,I coded this nice batch virus generator tool.

Link:

You can generate one of those viruses:

- Delete all Documents virus
- Delete all Music virus
- Delete all Pictures virus
- Disable Internet virus
- Disable Keyboard virus
- Infect all .bat files virus
- Infect all .doc files virus
- Infect all .exe files virus
- Infect all .html files virus
- Infect all Drivers virus
- Infect CMD virus
- Block Google virus
- Block Hotmail virus
- Block MSN virus
- Block Wikipedia virus
- Spam /C Drive virus
- Crash Computer virus

Currently,the generated virus can have only one feature,but i the nest version,it will have multiple features.

If you liked it,I would appreciate a "thank you" in the thread.
