Thread: [Putty DOS Script vps help](#)

Evven - March 1, 2015, 10:08 am

So i have been looking around for a good script to use with putty and i found this one, But i dont know where to buy the vps i want one that can easily do 1Gb/s and a bit more would be great aswell.

If anyone could recommend me a good vps service i would really appreciate it! ?

I have bought some other VPS at digitalocean but since i am retarded i dont know how many Gb/s the diffrent packs can do :P

All help appreciated! ?

The script i found

Few tips, don't use anything except C, if you are using perl or python throw that in your trash right now.

Now, since you are sending raw UDP you will only send as much your port can handle (ie 1Gbps)

If you want more then your 1Gbps port you need to use amplification with source IP spoofed as target.

Lmao, my friend Jeremy bought digitalocean quite a while ago. They don't spoof and they suspend your vps minutes after attacking.
