Thread: [iTunes error -23](#)

heritage. - March 1, 2015, 11:30 am

Trying to update my iPhone to 8.1.3 but every time I try and download the software it just brings up the error 'There was a problem trying to download'.

Tried to download the iOS off redmondpie and that doesn't seem to want to work either.

Any reasons why?

Hey, just input your iPhone model and correct version here and I'll get back at you with a fully functioning firmware link briefly.

iPhone 6 Plus // 8.1.3 firmware.

Thanks boss.

Thanks boss.

Hey buddy, here's the download link for iOS 8.1.3 for iPhone 6 Plus, it should perfectly download it and just in case you weren't aware and are looking for such a thing; there is no jailbreak available for iOS 8.1.3.

Anyways, the download link can be found [here](#)
