Thread: [Hopeful Help Desk! - Ask Any Questions! - Botnets, DDoS, RATs, Everything!](#)

Hopeful Goods - March 2, 2015, 2:29 pm

Hopeful Help Desk

Post and I will reply as soon as possible!

I would to start up my own help desk for new users.

I am experienced in most fields and will be able to help you.

I can help code Python, Perl, PHP, and any other common language.

If I am unfamiliar with the code, I will teach you my learning process called Google.

Ask Away!

F.A.Q

Spoiler ([Click to View](#))

How do I DDoS?

Buy a VPS that spoofs and find some public DDoS scripts.

I will add more the this list..

sophrosyne - March 2, 2015, 4:31 pm

Good luck with your help desk! Hope to see some questions answered with great, helpful, noob friendly answers.

TRH4CK - March 2, 2015, 4:34 pm

Why a RAT over another one ? (i know some has different features but e.g: darkcomet vs nanocore for example, dc is native and nc is managed, dc is free while nc is not, etc...)

Hopeful Goods - March 2, 2015, 4:34 pm

(Mar 2, 2015 05:31 PM)chakra Wrote: [\[CITE\]](#) Good luck with your help desk! Hope to see some questions answered with great, helpful, noob friendly answers.

Thank you! I will try my best.

If you are looking to make money; look for money making opportunities!

Like Bitcoin mining or form stealers.

What exactly are you looking to get out of your slaves?

L00nyBin - March 2, 2015, 4:39 pm

I can't PM since I am new and am not of any title, however I am a very quick learner as well as very interested in learning as much as I can about every aspect of a computer. If you could figure out a contact method I would appreciate you answering some of my questions I've wanted to ask someone one on one.

-The one and only,
L00nyBin

Hopeful Goods - March 2, 2015, 4:51 pm

L00nyBin

You can add my skype "xen.dev" and I will answer any questions you have.

Ricky_Right - March 2, 2015, 5:02 pm

What programing languages would I need to know to bypass an anti-cheat system(hackshield, VAC, punkbuster) or whatever games use now a days. Also how much knowledge of reverse engineering would I need.

Thanks

Hopeful Goods - March 2, 2015, 5:17 pm

(Mar 2, 2015 06:02 PM)Ricky_Right Wrote: [\[CITE\]](#) What programing languages would I need to know to bypass an anti-cheat system(hackshield, VAC, punkbuster) or whatever games use now a days. Also how much knowledge of reverse engineering would I need.

Thanks

Well, first thing you would need to do is research what game you are trying to reverse engineer. What game are you looking to "hack"?

Here is some example code for CS GO

PHP Code

```
<?php
#include "ProcMem.h"
#include <conio.h>
```

```
ProcMem mem;
using namespace std;
```

```
class read; //Definition
class read{
public:
```

```
    int i_Enemies[32]; //Enemy Array
    int i_Count;
    //Found Counter / Array Index - Allows Us To Populate Enemy Array Correctly (in order)
    int i_team;
    int e_team;
    DWORD dwClient;
    DWORD dwPBase;
    DWORD dwEntity;

    void Read()
```

```

{
    dwClient = mem.Module("client.dll");
    dwPBase = mem.Read<DWORD>(dwClient + 0xA33234);
    i_team = mem.Read<int>(dwPBase + 0xF0);

    for(int i = 0; i < 64; i++)
    {
        //Loop From Base Entity Address by 0x10 On Each Iteration
        dwEntity = mem.Read<DWORD>((dwClient + 0xA4C3E4) + (i * 0x10));

        //Prevent Crash From Reading Null Pointer - also stop counting when weve read the last entity
        if(!dwEntity)
            continue;

        e_team = mem.Read<int>(dwEntity + 0xF0);

        //If An Enemy Has Been Found, Store Their Entity Index ID Inside Array
        if(e_team != i_team && e_team > 1)
        {
            i_Enemies[i_Count] = mem.Read<int>(dwEntity + 0x64);
            i_Count++;
        }
    }
}
}info;

```

```

void Trigger()
{
    //Variables
    int iTarList[32]; //Enemy Array
    int iResponse = 1; //Default Fire Rate
    int * i_cID;
    int cID;

    //Read Relevant info
    info.Read();

    while(1)
    {
        //Read Relevant info
        info.Read();

        //Populate Enemy Array
        for(int i = 0; i < info.i_Count; i++)
            iTarList[i] = info.i_Enemies[i];

        //Read Whats In Crosshair
        cID = mem.Read<int>(info.dwPBase + 0x2374);

        //Compare Current ID To Enemy Arra
        i_cID = find(iTarList, iTarList + info.i_Count, cID);

        //Shoot If Current ID Matches Enemy ID
    }
}

```

```

while(*i_cID == cID)
{
//Read Whats In Crosshair
cID = mem.Read<int>(info.dwPBase + 0x2374);

//Compare Current ID To Enemy Arra
i_cID = find(iTarList, iTarList + info.i_Count, cID);

//Less Detectable Method
mouse_event( MOUSEEVENTF_LEFTDOWN, 0, 0, 0, 0 );
Sleep(iResponse);
mouse_event( MOUSEEVENTF_LEFTUP, 0, 0, 0, 0 );

//End Triggerbot - Safety Key Encase Of Infinite Loop
if(GetAsyncKeyState(VK_END)&1)
    return;
}

//Reset Entity Counter
info.i_Count = 0;

#pragma region Fire Rate Modifier

if(GetAsyncKeyState(VK_ADD)&1)
{
iResponse++;
if(iResponse > 15)
    iResponse = 15;

system("cls");
_cprintf("%d", iResponse);
}

if(GetAsyncKeyState(VK_SUBTRACT)&1)
{
iResponse--;
if(iResponse < 1)
    iResponse = 1;

system("cls");
_cprintf("%d", iResponse);
}

#pragma endregion

//End Triggerbot
if(GetAsyncKeyState(VK_END)&1)
    break;
}
}

int main()
{

```

```

mem.GetProcess("csgo.exe");

while(1)
{
    if(GetAsyncKeyState(VK_HOME))
    {
        cout << "\nON";
        Trigger();
        cout << "\nOFF";
    }
}
return 0;
}

```

This is in C++ and I found it [here](#)

I would look up source codes and learn how they work.

Once you got a basic understanding of the scripting mods, make some of your own!

Maya Badmash - March 3, 2015, 2:26 am

just curious to know the ways how One catches a hacker or tracks one down.

Say I hacked into a website with my ip spoofed as well my mac and i own a private server which do not store my logs. So what are the possible ways some one could catch me ??

Hopeful Goods - March 3, 2015, 4:42 am

(Mar 3, 2015 03:26 AM)Maya Badmash Wrote: [\[CITE\]](#) just curious to know the ways how One catches a hacker or tracks one down.

The most common way would be you tell a friend then he enters the system and gets caught then rats your out.

That is where most hacking crimes go wrong! Make sure you are the only one that knew it happened, no matter what! I learned that the hard way..

Anyways, yeah, IP address and mac can lead them to find you, but using a proxy will make them have to call up and request all access logs and even that probably wouldn't get them far.

Basically, just worry about the social aspects .

drysse12 - March 3, 2015, 5:49 am

very nice thread.

Can you recommend a good VPN that dont keep logs?

Or maybe another way to stay hidden?

Ð???c???? ?ø??? - March 3, 2015, 6:15 am

may you tell me how to get the real facebook account of someone using his fake facebook ?

GhostClient - March 3, 2015, 7:17 am

What are shells, and how do I use them to help boot? Thanks!

Or maybe another way to stay hidden?
A few good VPNs that I have used are Private Internet Access, NVPN, and Mulvad.
None of which keeps logs. These will keep you anonymous.

(Mar 3, 2015 07:15 AM)\$uper\$e@rcher Wrote: [\[CITE\]](#) may you tell me how to get the real facebook account of someone using his fake facebook ?

You could SE them into getting their email then enter that into the facebook search and see if a Facebook comes up for that email.

A good way to get someones email is tell them you want to pay them on PayPal for something.

(Mar 3, 2015 08:17 AM)GhostClient Wrote: [\[CITE\]](#) What are shells, and how do I use them to help boot? Thanks!

I am assuming you are refering the the UDP DoS shells.

These shells can be scanned for using Pycurl or any other code that has a curl module. Just scan for ip/udp.php and then split the return with a key word like "ddos" and boom you got a list of udp shells.

These are basically just PHP shells that hit as hard as PMA does per bot.

If you want to hit hard you may need up to 100 working shells for even 1Gbps since these are just web servers sending attacks.

Most shells have an API system which works like such
vulnsite.com/udp.php?host=123.123.123.123&port=80&time=30

The things after the question mark are called GET parameters (?host=)

These are used to pass data to the PHP program.

(Mar 3, 2015 11:20 AM)Prycia Wrote: [\[CITE\]](#) Nice to see that people are giving back to the community by doing things like this. Great work OP, stay HQ

No problem! I enjoy helping others and want to see new users succeed with their goals.

Ð???c???? ?ø??? - March 3, 2015, 1:38 pm

well my dear friend there is no way for her to give out her e-mail ! and the paypal thing is not an option either ? , i need another way if you know please :)

Hopeful Goods - March 3, 2015, 1:40 pm

You could just try asking. Why do you believe this person has another Facebook?
If you have access to a computer they used, the auto-fill setting can revile their emails.

Ð????c???? ?ø??? - March 3, 2015, 1:47 pm

Hopeful Goods - March 21, 2015, 10:32 pm

Still open if anybody has any questions!
I will be online for a while.

kirby193 - March 22, 2015, 8:57 am

Ok, I got one.

How in the actual hell do I have slaves (2 to be exact) when I HAVEN'T STARTED SPREADING YET.

I'm serious. I haven't spread except to my own computers which only I have access to.
I'm using a no-ip with a 4 digit number before the .no-ip so someone making a typo in both that AND the port are astronomically low.

I'd really like to know.

Hopeful Goods - March 22, 2015, 9:01 am

(Mar 22, 2015 09:01 AM)Hopeful Goods Wrote: [\[CITE\]](#) Who are the two slaves? Are they your computer or someone elses?

Someone elses.

I have a feeling they're testing to see if the files have a backdoor because of the different ip on connection everytime and the fact that the connection is killed if I try to remote desktop. The only reason I think its 2 is because one of them always has the same pc name although it could be him on a different VM.

No idea

No idea

Strange, I have no explanation for that.

Amlgoodyet - March 22, 2015, 4:13 pm

Hey man, I have no idea where to start with any of this stuff. I was in a twitch stream the other day and a guy told me about this website! I've read a couple threads on the basics and what this is all about, but everytime I go searching I always end up somewhere else. I think it's great to know what you're doing on the internet and how to be safe while at the same time having a bit of fun. I'd also like to make money out of this while being able to practice personal security.

Thank you, any feed back is appreciated.

Hopeful Goods - March 22, 2015, 4:35 pm

Taking a course definitely helps you understand a language.

When I learned python in school it allowed me to look at old python scripts I had and actually be able to read and understand them. This led to me being able to take pieces of other peoples code and make it my own. That is how all coding works, just putting together things more complex and different.

I would start with HTML/PHP.

You can make money buy selling things on HF.
Scroll around and see if you can make anything.

Ayyomark123 - March 22, 2015, 10:22 pm

i want to learn coding so i can code my own DDoS , can you help me which coding language you prefer?

Hopeful Goods - March 22, 2015, 10:29 pm

(Mar 22, 2015 10:22 PM)Ayyomark123 Wrote: [\[CITE\]](#) i want to learn coding so i can code my own DDoS , can you help me which coding language you prefer?

Well, learning C will give you better code and a better udnerstand, but that is very complicated and much harder than what you might want.

Python is good for rapid development and has almost a module for anything.
