Thread: [How to decrypt tls v1.2](#)

se123 - March 3, 2015, 11:09 am

Heey if been starting to learn wireshark v 1.12.3. when. When i wanted to recover what i typed in a login screen i found it was encrypted with tls 1.2. So how can i encrypt this note: i dont have the servers private key!

Im only starting with hacking and stuff so please no hard explanations.

many thanks :)

Without the key, you can't. It's not possible. TLS is a leading secure communications standard for a reason. That reason being that it's secure. Without the keys, you are basically out of luck. You would need to somehow get the key.

Heey

Okey i will go and search for a method where i can get the private key.

thanks for the replay.
