Thread: [Create Netseal License](#)

coolerfarmer - March 4, 2015, 8:48 am

hey, just want to share this little code piece. You can create licenses for your netseal application in c# with it:

PHP Code

```
<?php
using (WebClient wc = new WebClient())
{
    NameValueCollection nv = new NameValueCollection();
    nv.Add("key", "YOURAPIKEY");
    nv.Add("track", "");
    nv.Add("type", "1"); //free=0, bronze=1, silver=2, gold=3, platin=4, dia=5
    nv.Add("points", "");
    nv.Add("time", "0"); //unlimited = 0
    var responseBytes = wc.UploadValues("http://seal.nimoru.com/Remote/createCode3.php", nv);
    var serial = Encoding.ASCII.GetString(responseBytes ).Substring(1);
}
```

Isn't there a licence panel for Net Seal? I can see uses for this for web applications though.

Just to nitpick, use HttpClient instead of WebClient, and Dictionary<string, string> instead of NVC since you won't have repeats, otherwise mind explaining what this does a little more? I thought this was built into the panel.

It is, but you can integrate this into your applications. E.g. I need this to automatically transfer the licenses of my old customers to the new version.

ah okay, I can see that being pretty useful then, thanks for the snippet!
