Thread: [how do i hack my b/f gmail account? i know his gmail address not the password.](#)

harley01 - March 4, 2015, 6:32 pm

How do I hack my b/f gmail? I know the gmail address

P3TE - March 4, 2015, 6:33 pm

You can bruteforce it using some programs commonly found in the marketplace.

KandyKane - March 8, 2015, 5:42 am

harley im looking for the same thing. let me know if you find anything.

is bruteforce remote?

Muro - March 8, 2015, 5:49 am

I think you can use a Man-in-the-middle attack, but your boyfriend HAS to be using the SAME network as you are. With this way, you can use your phone with a certain app - keep it running and wait until he signs in on gmail. Let us know if you can do this, it is much more efficient than the bruteforcing method.

boyzcode - March 8, 2015, 5:51 am

This is simple, install a logger on her pc or send her crypted exe file to email

MrSuperman - March 8, 2015, 5:52 am

(Mar 8, 2015 05:51 AM)boyzcode Wrote: [\[CITE\]](#) This is simple, install a logger on her pc or send her crypted exe file to email

Lel b/f is now a her. Gg following rule 16

ÇdnîS Lu?i? - March 8, 2015, 6:00 am

You can Bruteforce, Keylog, Rat, or social engineer. Research one of those strategies and pick the best option.

KandyKane - March 8, 2015, 6:10 am

In my case it has to be remotely done. Suggestions?

OhWordTho - March 11, 2015, 3:38 pm

Bruteforcing can take FOREVER, especially if his password is very clever. However, if his password is more simplistic, then bruteforcing could very well work quickly! Butttttt, since the password is unknown it's a gamble. I would personally say RAT would be the best way to go. ? My personal opinion!

vendettalogzz - March 11, 2015, 3:49 pm

There are a good range of loggers you can have him download...works like a charm

Comedic - March 11, 2015, 6:34 pm

Take a look in the hacking tutorials if you haven't already.

'Cynical - March 11, 2015, 10:37 pm

Answer the security questions on his account...

powerl105 - March 12, 2015, 4:39 am

lol at telling this chick who obviously has no experience to MITM. You have some reading to do. I think you should use SET/websploit and run an apache server/mysql with a cloned gmail page. Then middle finger of doom your bf with a MITM dns poisoning attack or social engineer him with a phishing email from "gmail" that When he types in his credentials they get stored for you viewing. jk. I am assuming time is of the essence. You could always go to the RATTING forum section and maybe pay a member to give you instructions and an install to stick on a USB stick. Maybe they will give you the password. This is assuming you don't have the time or will to learn basic networking and RATTING etc. Maybe the most noob route would be to pay for some commercial keylogger software and install it on his pc when hes not around. Clear his browsing history/cookies etc though so he actually types in his credentials so you can log it. I am assuming he isn't savy and won't notice. If the AV picks it up....add it as an exclusion....if you have enough time to do this.

Real answer= Sounds like you have no trust in your relationship. Attempting to spy on your bf indicates low self esteem and lack of communication between you two. Sounds unhealthy. Just confront him over whatever the issue is. You will know if your getting the runaround, and it maybe time to walk away.

'Cynical - March 12, 2015, 12:22 pm

Take his phone, do password reset to phone, delete the text on his phone afterwards.

ProCasso - March 12, 2015, 8:22 pm

Add me on skype I can help!

Skype: ProCasso

BlackHoax - March 12, 2015, 11:24 pm

I offer free Rat Setups it will allow you to keylog/retrieve any passwords he has saved. If you want me to help out check out my thread. Btw a better place for this would be RAT section.

KandyKane - March 13, 2015, 1:29 am

Mr Dark how can I get in touch with you?

Can you possibly email me?

BlackHoax - March 13, 2015, 3:27 am

(Mar 13, 2015 01:29 AM)KandyKane Wrote: [\[CITE\]](#) Mr Dark how can I get in touch with you?

KandyKane - March 13, 2015, 3:42 am

I dont skype but I can try. I actually downloaded it on my phone a couple days ago. I guess I do need to get with the times. Anyways, is it ok to put my email here? Or, whats your Skype name?

Eldar - March 13, 2015, 3:44 am

You can also RAT her and find it out. ?

lollercoasters - March 15, 2015, 12:03 am

(Mar 13, 2015 03:30 AM)Charlatan Wrote: [\[CITE\]](#) I guess b/f could be best friend wich can be any

gender o.o

it says "his" in the topic title :P

TheMissingPort - March 15, 2015, 2:10 am

I have a much easier method. Has he logged into it at your house? Do you have access to his wifi still? You can easily do the gmail account recovery on it and it'll let you change the password immediately since it thinks he is trying to log in. The only thing is you're going to have to change the password to get in

Billie Joe Armstrong - March 18, 2015, 1:11 am

Install a keylogger on his computer and let the password come to ya..

sophiealexandrine - April 30, 2015, 11:53 am

install keylogger or use rat, i think rat is best option IMO.

Judicious? - April 30, 2015, 9:25 pm

Super easy. Just go to the forgot password link and enter his information. If it's tied to a cell phone then just install a keylogger on his pc.

Silfy - April 30, 2015, 9:27 pm

(Mar 4, 2015 07:32 PM)harley01 Wrote: [\[CITE\]](#) my b/f gmail?

Still confused on what the hell b/f gmail means..

Judicious? - April 30, 2015, 9:39 pm

(Apr 30, 2015 09:25 PM)Dpmayer Wrote: [\[CITE\]](#) Super easy. Just go to the forgot password link and enter his information. If it's tied to a cell phone then just install a keylogger on his pc.

Or get ahold of his phone and send the code to it and then just enter it on the website forgot password screen and reset the password. One thing to note here is that if they have an .i.p.h.o.n.e. they most likely have an i.c.l.o.u.d. account. Which would be even better because you could just hack their security questions and change the password on their account. Then you would login to something like Dr.f.o.n.e. and download their whole phone backup and retrieve text messages, phone calls, voice mails, pictures, notes and more.

How to Recover a Gmail Password [\(Click to View\)](#)

How to Recover a Gmail Password Wrote:...Method One of Three Wrote:Using the Account Recovery Page

1

Visit the Google Account Recovery page. If you can't remember your password, and you have a phone number or alternate email address associated with your account, Google can send you a link to a password reset page. If you don't have either of these associated with your account, see the next method.

Visit google. com /accounts/recovery/ to start the process.

Alternatively, load the Gmail page and click the "Need help?" link underneath the login box.

2

Select "I don't know my password". Enter the Google account email that you are trying to recover. If you can't remember your username, select that option instead. Click the "Continue" button.

3

Click "I don't know" or enter your last known password. Entering your last known password can help the recovery process, but isn't required to retrieve your account.

4

Choose your recovery option. You can either have your recovery details sent to your alternate email address or to your mobile phone. You will need to have set these for your account in order to be able to use them.

If you choose to receive recovery information sent to your phone, you can either receive it via automated call or SMS.

If you don't have recovery information associated with your account, you will be taken to the account retrieval survey.

5

Enter your verification information. If you selected to receive a verification code over the phone, you will be prompted to enter it. If you had a recovery email sent to your alternate account, click the link in the email you receive.

6

Create a new password. After entering the code or clicking the link, you will be prompted to create a new Google password. Enter it in twice to confirm it. Click the "Reset Password" button to continue.

Method Two of Three Wrote:Filling Out the Password Recovery Form

1

Start the password recovery questionnaire. This will start automatically if you don't have any recovery information associated with your account (secondary email or phone number) when you try to reset your password using the above method.

The recovery form is not instant, as it has to be reviewed by a Google employee. You can try multiple times if you don't get everything right the first time.

2

Enter in a working email address you have access to. This is where the response to your recovery form will be sent, so make sure it's an email that you can access. If you don't have another email address, you can create one for free in a couple of minutes.

3

Choose the last time you accessed the Google account you are trying to recover. You don't have to be exact, but guessing close will increase the chances that you are able to recover your account.

4

Choose the date you created your account. Again, this doesn't have to be exact.

5

Answer the security question. If you have a security question associated with your account, you will be asked to answer it.

6

Enter addresses that you frequently contacted. You can enter up to five addresses. You can also name any labels you may have created in Gmail, and an old recovery email you might remember.

7

Select the other Google products that the account used. These could include Android, Calendar, Gmail, and Hangouts. You will also need to enter the approximate dates that you started using these products.

8

Submit the form. Once you click the "Submit" button, your questionnaire will be sent to Google for

review. You will be contacted about the results of the review at the email you provided.

Your IP address will be logged, both to help your recovery and prevent fraud.

If your account cannot be recovered, you can try the form again with more specific answers.

There is no way to contact Google about password recovery beyond the methods outlined above.

Unfortunately, Google does not have a customer service department that can help with lost passwords.

Method Three of Three Wrote: Using a Password Recovery Program

I don't know if this program or website is legit so be careful before proceeding these steps. But I'm sure there are good programs like this out there.

1

Visit the NirSoft website. Enter nirsoft.com into your browser's address bar

2

Download WebBrowserPassView. This program will scan your web browsers for stored login information. You may be able to retrieve your password this way.

Some security software may label WebBrowserPassView as malicious, but this warning can be safely ignored.

3

Run the program. WebBrowserPassView does not need to be installed. As soon as it runs, it will scan all of your installed browsers and return your usernames and passwords for the websites you visit.

4

Find the Gmail entry. This will usually be one of the Google entries.

5

Note your username and password. If it's your most recent password, you should be able to use it to log in. If it's an older password, you can use it to help your password recovery efforts.

How to Reset an AppleID [\(Click to View\)](#)

Their AppleID is almost always their normal email account. If it's not try their email @hotmail or @yahoo or @icloud. Lots of people use the same email ID across all email providers.

How to Reset an AppleID password Wrote: The password reset process has 6 steps:

1. On iforgot.apple.com, enter your Apple ID to begin the process.
2. Select an authentication method - "Answer security questions" is the one we would use.
3. Enter your date of birth.
4. Answer two security questions.
5. Enter your new password.
6. Be taken to a success page saying your password has been reset.

Dr Fone Trial [\(Click to View\)](#)

Dr Fone Trial Link (be sure to use the direct link and not download with the cnet installer Wrote: download. cnet. com/Wondershare-Dr-Fone-for-iOS/3000-18551_4-75803041.html

Also, you can install a keylogger on their pc or laptop and it will record all their key strokes. There are somewhat free legit ones tht you can get on cnet downloads —these usually have settings so you can change them to start at pc startup and hide when it loads. You can also set a hot key shortcut on most keylogger (like Shift+Ctrl+S) to show the keylogger program then just look for his email. On the line below it that is his password.

A keylogger I found [\(Click to View\)](#)

Found this keylogger not sure if it's 100% safe but it has great reviews Wrote:download. cnet. com/Free-Keylogger-Pro/3000-2162_4-75886072.html

If he has outlook installed version 2010 and lower you can also download an outlook email password grabber from cnet downloads as well and run that and it will show the password and email stored within outlook.

Passview program for outlook ([Click to View](#)) looks like the same company that has the browser pass view has one called mail pass view Wrote: I've never used this so at your own risk. download. cnet. com/Mail-PassView/3000-2092_4-10466299.html

(Apr 30, 2015 09:27 PM)Fapple Wrote: [\[CITE\]](#) Still confused on what the hell b/f gmail means.. I'm assuming it means boyfriend or best friend or who knows.

Great method. I didn't know that if you're logged in on the same ip that it will bypass the need for the activation code. Interesting I'll have to try that out.

Yeah you could go through all that and do a man in the middle, or even monitor or redirect network traffic by poisoning and sniffing his outgoing network traffic over the air. But why when you know them and have access to their computer or can answer some easy security questions. Maybe for the challenge or fun of it. I guess you kinda have a point. Lol

Ok, Dr Phil I appreciate you taking the time to school me on my relationship and I hate to burst your OH SO BIG EGO but you're wrong. This has to do with a sociopath. Multiple personalities and addiction problems being around my small child. There is no sign of danger on the outside but on the inside, I fear for my daughters safety. If I could add pics to this you would understand and probably feel like a huge douche. I've been trying to get therapist, doctors, and school officials involved but because he appears to be safe, there's no concern. Do you know what a sociopath is?

He is extremely computer savi. His computer has more security then the white house. He's def not going to type in his credentials. Have a good day. Asshole.

Haxorb4lo - May 1, 2015, 5:13 am

Rat or key logger or Brute force

Judicious? - May 1, 2015, 8:01 am

You don't need to have access to his pc to get his email. You know enough about him to use the

recovery option for his email account. Follow the steps outlined above. Method 2 is easy just setup an email that looks like it would be his and enter all the info you can think of. It's helpful to have a couple subjects to emails he has sent so maybe send him some emails or look for the ones you guys have already sent.

As far as creeping the rules I was just letting them know that they posted in the wrong forums with their question...

baldie278 - May 1, 2015, 10:05 am

This was an excellent advice tutorial. Thanks for the step by step instructions.

hornhack - August 22, 2015, 1:17 pm

i checked all those programs but none of them seems to work...i forgot my gmail password and can't log in...someone help me please

waqob - August 22, 2015, 1:39 pm

Send a RAT or Keylogger to him

drive.webclients - August 27, 2015, 6:07 am

i have the user and already the password (i get it with an exploit) for a gmail, how can i jump verification account process?

i know this will send a msm or a call to the cel phone number. But of course a dont have the cel device.

what can i do to hack without a warning to the owner?

anon12345 - May 31, 2018, 7:23 pm
