Thread: [MySQL Errors Outputted](#)

c x y k - March 8, 2015, 10:02 am

Hola.

Just noticed that when I clicked on a thread that I had posted on, a MySQL error was in my signature. It was a pale box with a red outline and I believe it dumped some data out.

Probably nothing bad, but just wanted to warn you.

Cheers.

This is useless unless you tell us how you made it output the error and a picture of the error code

Hello,

Probably you misunderstood his post.

myBB has been designed to output MySQL errors when it faces any. Probably, this time its output was the signature space, you never know.

I have been working with myBB platforms 2 years now, and this is the first time that I hear something like that. I know that it outputs all MySQL errors in a different place.
