Thread: [I wanna learn](#)

Ammar_HF - March 10, 2015, 3:34 am

I wanna learn to exploit PHP Version 5.4.9-4ubuntu2.2

I do not know what materials I need to study to be able to hack that,that's why I'm asking you

I was experimenting on a server which forbids people from entering it,then I've found a hole which lets me access those files and then I've found many stuffs and I'm sure 100% it's hackable I also got access to 2 php files (source),but what really gave me interests on was a file that show me the whole map of the server,so to say(It tells me which ports/services are running,what version,sql etc.) the file looks like this((ITS NOT THIS,BUT ITS SIMILIAR,with that I mean some texts are changed,but the style is exact same as by this picture)):

[img]http://4.bp.blogspot.com/-lbyyBdL2qv8/UWUQmHH3_hI/AAAAAAo/euwtWYHOrqU/s1600/info_php_01.png[/img]

I don't know if you can see the picture,but for no reason I can't see it anymore,so I have uploaded the same picture on this link:

and the title of the file is: phpinfo()

I would appreciate any of your helps,thanks in advance

?

Learn Linux, Networking, Server auditing, PHP, HTML, CSS, SQL, and generic exploitation.

I'm good with all that,except server auditing(first time I hear about this) and SQL

Thanks for your replay

Is there a program that we can use.

Before anything, learn how to protect yourself & hide your information / data online. Your privacy is the most important thing.

It's really not.

Who said this guy is planning on doing anything privacy-threatening?

Clearly you are talking about being "undoxable" which really shouldn't be a first priority.

Clearly you are talking about being "undoxable" which really shouldn't be a first priority.while it's not top priority, it also matters little as long as you learn SOMETHING
