Thread: [\[Tutorial\]\[HUGE\] Now how to be really secure/anonymous online! \[Explained good\]](#)

Private Network - March 10, 2015, 9:25 am

How to be secure when doing anything.

Ofcourse most of you guys ask about being secure/anonymous online.
Let me tell you this: You cannot be 100% secure or anonymous online.

A quote I had seen somewhere about forensics:

Quote:Make them hard to find you, make it impossible to prove its you.

What you will learn:

0x1 Shopping as safe as possible

0x2 Talking safe online

0x3 Having a fake identity

0x4 Posting fake doxes

0x1 - Some tips about shopping online.

Use fake information such as fake phone number, 10 Minute Mail, fake address (Drop Address.)

What is a drop address?

Quote:When you find an empty house around your area and provide that address, you have to know the time of delivery and when they see its empty they will just leave the package at the empty house or at a neighbours door. MAKE SURE THE NEIGHBOURS ARE NOT HOME.

Where do I verify my phone number? <http://www.phoneverify.co/> (They add 5 new numbers everyday, sometimes work for google)

Where do I get a 10 minute mail and what is it?: <http://www.10minutemail.com/>

It is a web application where you can get a mail address that will remove itself after 10 minutes, or you press "Give me another 10 minutes." and the same email will remain for 10 more minutes.

Use Bitcoin or any other crypto currency when possible, no need to explain this.

When getting fake details use <http://www.fakenamegenerator.com/>

If you buy virtual items etc that are illegall you should buy a cracked RDP and buy from there because if they trace you they find the RDP. (Make sure to do all of the RDP part with a VPN on.)

Where do I setup a Bitcoin address?

You could download the Bitcoin QT program to get a offline wallet but to get a wallet on the web I prefer <http://www.blockchain.info/>

How to setup an online bitcoin address: (With Pictures.)

Spoiler ([Click to View](#))

Step 1: Go to <http://www.blockchain.info/> and click "Wallet" in the navigation bar.

Step 2: Click "Start A New Wallet" under New Users.

Step 3: Enter all your details like you would normally do, GET A STRONG PASSWORD and USE YOUR MAIN EMAIL INCASE OF RECOVERY.

Step 4: Write this wallet recovery phrase down you will recieve.

Step 5: You are now done!

Now where do I buy Bitcoins?

I prefer to buy them off trusted members here:

[Currency Exchange](#)

READ THIS FIRST BEFORE BUYING ANYTHING OFF HACKFORUMS:

<https://hackforums.net/showthread.php?tid=1980510>

Example members: Staid, Neat, Cameron, beslim, Magicmann and Canada

0x2 - How do I talk safe online?

DO NOT use skype unless needed or are not using it for blackhat activities.

Tips on using skype:

1. Use a Proxy/VPN with an IP/Server in the same country as you, no one will suspect a thing.
2. Always keep the damn Proxy/VPN alive! Check the proxy daily and never turn the VPN off while using Skype.
3. Skype's can get jacked/suspended pretty easily because of customer support so make sure that you only talk to people that dont seem sketchy/like assholes.

Where can I get a free VPN (Note, these do log so do not use for blackhat activity, and these are blocked on HackForums.)

[\[censored\]](#)

[Hotspot Shield](#)

Where do I get a proxy? (Same note as VPN's.)

[HideMyAss](#)

Now you are wondering, why shouldnt I use skype?

An article showing proof skype reads your messages:

<https://defuse.ca/microsoft-reads-your-skype-messages.htm>

Here are websites (Skype Resolvers) that can get your IP from your username.

<http://www.Resolv.in/> or <http://www.SkypeResolver.xyz/>

Then what should I use to chat online?

XMPP/Jabber or ICQ.

Tutorial by Frankie on how to setup XMPP + OTR Plugin:

<https://hackforums.net/showthread.php?tid=4717011>

How to setup ICQ: http://www.icq.com/support/icq_8/start/install/en

0x3 - Having a fake identity

First off all some tips:

ALWAYS tell everyone the same thing, do not tell someone you are 16 and tell the other person you are 18.

Write down the information in a file.

Practice to trusted people that you are the fake person, the more you act like them the more you believe you are them (The identity).

Where do I get a Fake Identity?

Go to this website: <http://www.fakenamegenerator.com/>

Safe some of the information that most people can dox to a file.

Try to leak some of it on your profile, etc responding to threads like: "From what country are you" and say as example: Texas, USA!

Try to make up things as an extra thing.

So you have your Fake Identity, but where do I use this mainly?
When buying things/when registering on a new site.

0x4 - Fake Doxes

Sites to post on are SkidPaste/Pastebin or F*I. (F*I. has HF doxes so protecting that URL, if you know that URL use it.)

NEVER post the same dox on two different sites.

Add some real information, like first name, old emails, proxy/vpn IP etc.

And add some fake information from your identity.

How to help prove they are "real":

Get a LSX (*eakF***ms) or a GayForums Account (V*F)

And use your real alias like HF and put in your fake identity email and get yourself banned as fast as possible from those gay sites, what happens when you get banned?

The email gets posted on the site!

Example of a good fake email: FirstNameFake.LastNameFakeCountry@gmail.com

Or: FirstnameFake.LastnameFake@hotmail.com (or co.uk if your identity is from the UK.)

Make some things up on your doxes so they seem professional.

Format the doxes good.

FRANKIE - March 10, 2015, 9:27 am

Great to see my thread mentioned! Great post my man :)

Private Network - March 10, 2015, 9:28 am

(Mar 10, 2015 09:27 AM)FRANKIE Wrote: [\[CITE\]](#) Great to see my thread mentioned! Great post my man :)

Thanks for the feedback, it was the only good guide about setting up XMPP.

It took me pretty long to write this :P

NoMercy - March 10, 2015, 9:56 am

Amazing tutorial. I work with Jesse and I know she is a brilliant worker and her work is always amazing. Keep it up!!

Private Network - March 10, 2015, 9:57 am

Thanks alot for your feedback, I might add things later or change up the layout!

Raz3r - March 10, 2015, 1:25 pm

Great thread Jesse, I can see you put alot of work into it.

Darksidedefox - March 10, 2015, 1:33 pm

Great work, very interesting! Keep the good posts alive! :D

vendettalogzz - March 10, 2015, 1:47 pm

Nice thread. Sticking to a good secure routine to be 100% anonymous isn't easy. Usually there's always a little mistake here and there along the line.

D4T4B4S3 - March 10, 2015, 2:46 pm

Awesome tread mate, good information. Nice job with the tutorial! ?

JuliusK - March 10, 2015, 2:50 pm

Wouldn't recommend using VPN's as they store logs by default (or their ISP does), and you should obviously not use free VPN providers for black hat activities.

For additional anonymity, you should not be using Blockchain for storing your BTC refering to the method that allows you to get personal information off just a BTC address, and due to the recent private keys being leaked (that are related to Blockchain).

Also, using proxies/VPN/whatever on Skype doesn't matter at all; if they want to catch you - they sure as hell do. Avoid using Skype at all cost, and use XMPP (+OTR plugin), and always operate through a RDP/VPS/box, and never straight from your own computer if you're doing something illegal.

Decent tutorial overall, just not enough 'in-depth' if you're going to assist those who are committing crimes online, but it's a great tutorial for basic hackers and internet users.?

Private Network - March 11, 2015, 7:22 am

1. I never said you should use them for black hat activities.
2. I never said anyone has to use blockchain, I prefer it.
3. I provided a way of using XMPP, and most people dont want to buy an RDP/VPS.
4. Thanks alot for the feedback!

@Everyone else, Thanks alot for your feedback!

derrick1337 - March 11, 2015, 10:48 am

Looks nice, but I kind of regret now that I have given some my real info for people and e-mails that I

use aren't on my real name or address / phone etc shit. Dunno why am I even telling this useless shit to this thread, but anyways.. Second post too! :D

Private Network - March 11, 2015, 10:56 am

(Mar 11, 2015 10:48 AM)derrick1337 Wrote: [\[CITE\]](#) Looks nice, but I kind of regret now that I have given some my real info for people and e-mails that I use aren't on my real name or address / phone etc shit. The one with mheels in that is now dead.

Mcewhore - April 14, 2015, 12:43 am

Great tutorial thanks, basically it is not 100% anonymous. Bit is it even possible to be 100% anonymous?

Ghanem - April 14, 2015, 11:41 am

(Apr 14, 2015 12:43 AM)Mcewhore Wrote: [\[CITE\]](#) Great tutorial thanks, basically it is not 100% anonymous. Bit is it even possible to be 100% anonymous?

People are going to give you a simple "No." as an answer.
But to be honest, I don't think you should gauge your anonymity.

In my opinion:

- Either you do nothing and can be doxed easily.
- Either you do a minimum and can't be doxed by everyone but good people can. (Protip, don't be american.)
- Either you do "a lot" and even good people can't dox you.
- Either you're paranoid, in which case cops should have a tough time with you.

A lot of people will also come and tell you about the NSA being almighty and shit.
But to be honest, the NSA won't knock at your door unless you're posing a national threat to America.

That'd be the FBI's job (Or whatever the fuck's your country's own FBI equivalent) , and as far as we know, they can't do remotely as much as the NSA.

Private Network - April 14, 2015, 11:46 am

Bumping this up for new people interested in the topic.

Microlab - April 25, 2015, 7:20 am

Thanks bro, this is very helpful !

HIGH PAID FELLA - April 26, 2015, 3:41 am

Blockchain is not safe nor for your bitcoins nor for your privacy. I would suggest to setup a wallet such as MultiBit etc.

You haven't mentioned Socks5 proxies, VIP72 (good VPN's), to not buy shit from HF regarding proxies, socks5 or VPN's, or private keys or PGP signed keys.

Private Network - April 26, 2015, 3:46 am
