Thread: [WeBeX Source Grabber](#)

RebelSpinge - March 10, 2015, 5:58 pm

I made a website source grabber in visual basic. I hope you enjoy! ?

[Download Here \[MEDIAFIRE\]](#)

?

Brokeos - March 11, 2015, 1:40 am

Useless, you can use right click in a web browser and view source...

Tedd - March 11, 2015, 5:50 am

It's a beginner's program which starts building on critical themes of .net coding. It's not about how useful the app is.

You can also just open up Google and enter equations. Why would you need a calculator app then? (inb4 useful for offline, i know, it's just an example)

Everyone starts somewhere, and just because his app isn't useful doesn't mean he shouldn't get a little "hey, keep up the good work." Honestly, learning to code is one of the most boring things if you can't show someone what you are learning. It's like learning to ride a bike at 20 years old, but when you learn to ride it, you don't have anyone to say "hey, look at this." The other person would probably just be like you and say "wow, con-fucking-grats man, who cares?"

SyyK - March 11, 2015, 6:52 am

Good work.

Like Tedd already said its all about practice.

Keep up working on your own ideas. Thats how you get better! ;)

Good luck!

SNNK

Ninja - March 11, 2015, 7:27 am

Good job if you made it by yourself without looking at Youtube videos or have been spoonfed the code.

DBots - March 11, 2015, 7:33 am

I honestly expected the source. Even though this section is unmoderated I still think he should have provided a virus scan.

Such a simple program to give him grace. I honestly don't know what to make of this. It's so simple,

why not just provide the source code to gain trust from users and let them perhaps advice you on coding habits or tell you "props, well written"

Indeed. This is the coding section, not a section to release new tools you made without providing the source, as simple as the program may be.

Moen - March 11, 2015, 1:04 pm

I didn't expect the sourcecode being like that..

For everyone wanting the source

Spoiler ([Click to View](#))

Code Imports System.IO

Imports System.Net

Public Class WebSource

Private Sub button1_Click(sender As Object, e As EventArgs)

If Me.urlTextBox.Text = "http://" Then

MessageBox.Show(Me, "Please Enter Full Website Address" & vbCrLf & vbCrLf & "Example: http://www.google.co.in", "Error", MessageBoxButtons.OK, MessageBoxIcon.Hand)

Else

Try

Dim text As String = Me.urlTextBox.Text

Dim httpRequest As HttpRequest = CType(WebRequest.Create(text), HttpRequest)

Dim httpResponse As HttpResponse = CType(httpRequest.GetResponse(), HttpResponse)

Dim streamReader As StreamReader = New StreamReader(httpResponse.GetResponseStream())

Me.richTextBox1.Text = streamReader.ReadToEnd()

streamReader.Close()

Catch var_4_85 As Exception

MessageBox.Show(Me, "Connection Not Available" & vbCrLf & "Please Check Your Connection and Try Again" & vbCrLf & "OR" & vbCrLf & vbCrLf & "Website Not Found", "Error", MessageBoxButtons.OK, MessageBoxIcon.Hand)

End Try

End If

End Sub

Private Sub button2_Click(sender As Object, e As EventArgs)

Me.urlTextBox.Text = "http://"

Me.richTextBox1.Text = ""

End Sub

Private Sub button3_Click(sender As Object, e As EventArgs)

MessageBox.Show(Me, "Programming Done By: RebelSpinge! Lets Try And Keep The Thread Alive!", "About WeBeX", MessageBoxButtons.OK, MessageBoxIcon.Asterisk)

End Sub

```
Private Sub button4_Click(sender As Object, e As EventArgs)
    Dim saveFileDialog As SaveFileDialog = New SaveFileDialog()
    saveFileDialog.ShowDialog()
    Dim streamWriter As StreamWriter = New StreamWriter(saveFileDialog.FileName, False)
    streamWriter.WriteLine(Me.richTextBox1.Text)
    streamWriter.Close()
    MessageBox.Show(Me, "File Saved!", "Save", MessageBoxButtons.OK,
    MessageBoxIcon.Asterisk)
End Sub

Private Sub Form1_Load(sender As Object, e As EventArgs)
End Sub
End Class
```

Criticizing without arguing is pointless. I'd rather say it's pretty nicely coded for a beginner. There are a few exceptions handling, and he bothered using HttpRequest while he could have just used the WebClient class, and sum up all the shit to one line. Even though we then come to the point of using httpwebrequest when it's far shorter using the wrapper, it's good to use more "classical" ways of doing things when it's about learning, as all the languages don't have these over-simplified wrappers and it also helps you having a better comprehension of the way requests works.

To be honest your right Weakky, Have to admit 80% of the pop here would still struggle with a httpwebrequest so kudos to that. But still i would be honest and say it was shit so he will go away and improve it, rather than say "its good for a beginner" (maybe he won't try as hard to prove you wrong)! It is nice to see new people taking on a new language tho :) Always exciting times ahead ><
