most things for cs5/cs6 should still work for CC.

Probably the most useful place is Deviant Art.

You can find a ton of stock pictures,brushes,textures,tutorials,effects.

Planet Renders is great for people/characters without a background.

Wall Haven is good for stock pictures/texture/effects. (they are wallpapers)

As long as the photoshop version is not older than brushes you can use brushes since Photoshop 7

Things like brushes, patterns..etc.. Are version independent
