My Photoshop doesn't seem to be working however it was fine last night, I keep getting this error when using the text tool -

Spoiler ([Click to View](#))

I did just download Illustrator if that's linked with the problem in some way.

Nope, unfortunately it's every font.

Clear Photoshop Font cache, I can't remember the exact file path to the cache, but a quick search will show you.

After clearing the cache, restart Photoshop, restart PC and it should have solved the issue.
