Thread: [Adf.ly click,failing to make any click <.<](#)

Ammar_HF - March 15, 2015, 6:05 am

I fail to make any adf.ly click this is what it says:

The document contains no data.

then i changed something inside the custom mozilla and it still wont work automized I also tryed with java script like:

```
Code FasterBrowser1.Navigate("javascript:void( document.getElementById( 'skip_button' ).click()
)")
but fail
```

Also it is possible to check their adf.ly security scripts :D

P.S. I don't use IE I use Gecko(Skybound.Gecko)

Ninja - March 15, 2015, 6:12 am

```
FasterBrowser1.document.getelementbyid("skip_button").InvokeMember("click")
```

Moen - March 15, 2015, 6:14 am

Try changing the id to skip_ad_button

```
FasterBrowser1.document.getelementbyid("skip_button").InvokeMember("click")That's the error
from it
```

Error 3 'InvokeMember' is not a member of
'Skybound.Gecko.GeckoElement'. D:\folder\Form1.vb 15 13 Projectname

(Mar 15, 2015 06:14 AM)Moen Wrote: [\[CITE\]](#) Try changing the id to skip_ad_button
I tried ,but failed :/
Even that doesn't help((and I think that's the id for the picture only))

Is fasterbrowser a 3rd party browser? Or did you rename it from Webbrowser1
I know for certain that InvokeMember is a member of Webbrowser1

that code should work

Edit

You should probably switch to IE

It's that Gecko browser as you can see in the error.

Ninja - March 15, 2015, 6:44 am

The ID is "skip_ad_button", so the ID is not the only problem.

I suggest you use the built in IE browser as it is more reliable and works just fine.

fillobotto - March 15, 2015, 10:39 am

When will you give it up? It's the third thread you open about a thing you'll never succeed into.

Bro the more you say so,the more I will work this! ?

I won't use IE,it gets detected,so I will stay on this and I'll think a way out to make it succeed Inshallah

?

The id is skip_button,for the picture is skip_ad_button

I'm almost done with my project all is set,just trying to set up that click,anything is possible :)

I'm not using IE,I'm using Gecko(Mozilla Firefox)

PHP Code

<?php

geckowebbrowser.Navigate("javascript:void(document.getElementById('idname').click()) ")

Found that from Google, looks promising

Java script doesn't work on that browser :/,I tried to activate it but failed,but!

Here is the solution :D

```
Code FasterBrowser1.Document.GetElementByld("skip_button").Focus()
```

```
SendKeys.Send("{ENTER}")
```

I feeeeeell soooooo HAPPY :D

P.S. There is no way to put java script on,I want to make java script on to make my adf.ly bot more undetected :D

That's my next problem XD
