How about posting the source, alright mate?

```
Code Dim addressArray1 As IPAddress()  
Dim entry1 As IPHostEntry  
entry1 = Dns.GetHostByName(TextBox1.Text)  
addressArray1 = entry1.AddressList  
TextBox2.Text = addressArray1(0).ToString()
```

Code dropbox .com/s/sqku1bfhgpm60xq/Website%20To%20Ip.exe?dl=015 posts for almost a year.

Negative rep.

No virustotal scan.

I think i'll pass, thanks.?

Sakura-chan - March 15, 2015, 10:33 am

Post reported for infected links/downloads. Good luck ;)

If you're happy about making this then you have a long way to go. Nonetheless, congratulations on what is surely one of the first things you have made :)
