Thread: [Server Setup \(email | VPN | proxy | Firewall / router setup | VoIP | DNS | much more\)](#)

Jolyan - March 16, 2015, 4:07 am

Hello,

I'm offering my services to setup almost any (secure!) server for you.
I can also troubleshoot problems you cant fix and fix them for you or give you advice.

Also, I can write almost any script for you in shell/bash, powershell or python.

Through the years I have gathered loads of knowledge and experience using Linux (pretty much any distro, I prefer debian) but also windows server even in domain environments (corporate experience). I have experience with the a lot of software packages (closed & open source) including detailed knowledge of the functions, options and capabilities.

The way I secure servers is my own 'recipe' and none of the servers I have set up have ever been compromised (they are hackable, like everything is but I can guarantee you that I make it extremely difficult for anyone to do so).

Prices are subject to negotiation and are based on the work that needs to be done.

My services may not be the cheapest, but I will promise you that you will get the best.

I have several scripts that I can include for free (like for iptables, mail-servers, fail2ban and what not) these scripts are valuable as they have been written carefully and maintained for a long time therefore they don't contain stupid bugs or errors.

For any questions about details, PM me or leave a post here and I'll answer as quick as I can (I prefer the latter, other people may have the same question).

Terms & Conditions:

- I'm not setting up any botnet servers etc, plenty of other people here that can do that for you.
- I can deny any deal without having to explain why.
- No chargebacks, I will raise a public alert post and/or scam report.
- You have to provide the VPS / dedicated server.
- I advice to not use shared hosting due to problems with root/admin rights & performance issues - if you choose to do so anyway I can not be held responsible for any problems.
- You can ask for some minor modifications / changes if requested.
- You yourself are responsible for maintenance.
- Leaking of scripts or methods will be reported.
- I don't use skype (and neither should you), I solely use jabber with OTR.

I accept bitcoin & Paypal (Paypal only using a middle (wo)man or a trusted member).

edit: typos
