Thread: [Removing Written Protection on USB](#)

nickchan - March 16, 2015, 8:25 pm

I accidently junked my old thread (meant to junk a different one)

Anyway I can't format my usb drive because of written protection.

The main suggestions I found through the internet

Using disk part in cmd followed the steps of clearing readonly

whenever I typed "clean"

The media is write protected (yes, I was using admin)

Using regedit

Created StartageDevicePolicies Folder

Made WriteProtect

Changed the value to 0

Device manager doesn't appear to work it just says read-only can't do anything to it.

As well as MANY other tools.

Most of them said that they were write protected

If anyone has ANY suggestions on what to do please post them I'm running out of ideas and Need to use this.

archangel.dmitry - March 16, 2015, 8:31 pm

Do you need data off that drive? Or you just want to format it?

nickchan - March 16, 2015, 8:34 pm

I don't care if the data on it is lost or not.

archangel.dmitry - March 16, 2015, 9:07 pm

Have you tried clearing attributes or clean the whole drive?

yip yip.

both say it's written protected.

archangel.dmitry - March 17, 2015, 10:42 am

Have you tried manufacture utilities, if there is any?

kh3ir0n - March 17, 2015, 6:06 pm

archangel.dmitry is right, normally the best solution is manufacturer utilities. Anyway, you can try with this one:

[HP USB Disk Storage Format Tool](#)

Tried this.

Said read only error

It's a scandisk usb

archangel.dmitry - March 17, 2015, 6:54 pm

Have you tried connecting the stick to a different computer or/and different OS?

archangel.dmitry - March 17, 2015, 7:10 pm

I know gparted is a power tool. But it runs on Linux. You could try running Live CD and see if you can do anything about your problem from Linux.

kh3ir0n - March 18, 2015, 9:30 am

These are some other options:

http://download.cnet.com/2Tware-Fat32Format/3000-2094_4-75623509.html

<http://www.fat-32-formatter.com/downloads>

Also, you can try this:

Quote:The problem here is unable to copy files into USB drive such as flash drives, memory card and Ipod. When your USB flash drive, or memory card is write-protected, you will receive the following error message:

Cannot copy files and folders, drive is write protected

Cannot format the drive, drive is write protected

The disk is write protected

Remove write protection or use another disk

Media is write protected

This may caused by virus or malware script which modified the registry to make any drive write protect when connected to the computer, You can remove write protection from your usb flash drive or memory card using the below method:

1. Open Start Menu >> Run, type regedit and press Enter, this will open the registry editor.

2. Navigate to the following path:

HKEY_LOCAL_MACHINE\SYSTEM\CurrentControlSet\Control\StorageDevicePolicies

Note: If

the registry key StorageDevicePolicies does not exist, you will need to create it manually.

3. Double click the key WriteProtect in the right window and set the value to 0 in the Value Data Box and press OK button

4. Restart your computer and try copying files into your USB drives

TheSpecialOne97 - March 18, 2015, 12:31 pm

Try to repair diskpermissions. I had to do this several times because my 2tb harddrive keeps getting corrupt.
