Thread: [How do you guys spread through torrents?](#)

ninen2001 - March 18, 2015, 6:00 am

I've seen alot of people saying this method is great for spreading but I just can't. The only website I have found that actually lets me register and upload fairly fast is Kickasstorrents. I upload my completely FUD RAT and after a few hours or a day or so, "Your torrent has been removed due to malicious content.". Where the hell do I find torrent sites that actually lets me register and upload and doesn't remove my torrent before anyone downloaded it?

Lil Ricky™ - March 18, 2015, 6:03 am

I know right, I ask myself the same question..

Genicus - March 18, 2015, 6:05 am

It's complicated, use current rats to seed it, bind it with a working file, pump it, make it pretty and 100% fud glws. It does work easily,

Windows 10 - March 18, 2015, 6:11 am

I don't exactly know how to upload the torrents but heres what to do:

Bind your file to a working program (Maybe a keygen for a game ect.. but include the actual program so the user's don't get suspicious)

Include random/Junk files to make it look more legit when opening (Like folders & files ect..)

Make sure the file is 100% FUD And will stay FUD For a while (Use a private crypter for the longest lasting FUD Times)

Upload the file to a torrent site

seed the torrent on your slaves and other computers ect.. (Make it look legit as possible)

Watch the slaves roll in

I know that. But I can't find any site to upload it to.

The issue is, I don't know where to upload it. I've checked several sites and there's no register function on them.

When it's the time Torrent tracker website admins check accounts?

When you're good member for months spreading legit content or if your account is 5 minute old and immediatelly you upload content????

I have tried after being a member for 1-2 months.

nowak_mto - March 19, 2015, 1:36 am

Well, here are some things to know

- you're going to bind your rat to keygen/crack. it wont be fud too long, but its ok, everyone knows its false positive
- torrent websites check now if you modify keygen/crack, for example checksum is different so it means you add something
- dataprotector owner suggest change version of the file - doesnt help

So maybe take old account from your slave, start hosting legit stuff and after some time add your rats with new torrents?

usernameess - March 19, 2015, 1:49 am

What torrentsite is sugested for this?

I used to dot it on piratebay but they r down.

I tried to register on a few others but after 1.5 weeks they still wont let me seed & its only a movie no program, no virus.

LanMan - March 19, 2015, 5:15 pm

TPB ban you almost immediately if you upload a torrent in the windows category, even if it is 100% legit no malware.
