Thread: [Decode encrypted string / Crack this hash](#)

xnestea - March 19, 2015, 9:43 am

Just to make it short: I have a few HWIDs that are encoded, and I have no clue how it is encoded tho.

Can someone tell me? I thought they are Base64 but it won't decode

HWIDs:

```
MsfJMtGIHDJBHoU+khqvp6SeJUpGjzJCfORh+v6NjPHdlRcrq97pdA==  
HYxAkhLXPQ7eFfKs0697M811/ZYMWkDCG/wOn1hkHj6eQSRPhg8pWg==  
mp3al5hS4GcEM/JvR1z6xSRxxjh/+uQiHplAtByyOtx+Wp5Q1BUO2w==  
BNHepYBHesKU2Jt5ilZB4rrB93Bu2JmnwaFesOwVCNXld4LKN2t4Cw==  
sKMXQY42RJhW8vHpWQNSlys05BiCAdp8GcmdCaD6NJXH9MiczzrHHg==  
BNHepYBHesKU2Jt5ilZB4rrB93Bu2JmnwaFesOwVCNXld4LKN2t4Cw==  
QLenB2ZVAwPQU8yjFEEUPCsuRSpst/a/ZDly4rjIXxzE8oDHk8wkEg==
```

Why do you want to decode HWIDs? They are useless strings that are generated based on some known piece of info about a hardware device and then some random addition. These probably don't "decode" in the typical sense that you are thinking.

Deko - March 19, 2015, 3:30 pm

It could be base32 or multiple strings merged in one.

I want to know how it's encoded / encrypted so I can encode my HWID with the same Encoder/encryption to bypass a HWID protection on a software.
