Thread: [Twitter Auto-Posting & Auto-Follow - Fix needed](#)

chrisn - March 19, 2015, 10:16 am

Hi!

I have discovered an astonishing open source script that does practically anything you may require for Twitter mechanization, in the same way as tweet planning and auto-follow, auto-unfollow, find users by keyword and so on ...

The terrible thing is that the fellow who made it, is not reacting to emails and that there is no group for help ...

The script is somewhat old, yet lives up to expectations consummately (in the event that you have fitting php variant and php.ini)

The main missing thing, is that for planned posts, there is no media/ picture support.

Would someone be able to help to include picture transfer & posting, for both the single tweet and the CSV mass planning ? (for single, a drag n drop uploader will be extraordinary, for CSV mass import, to give url of picture to be gotten and utilized)

I have taken a stab at anything, still does not work ...

Regularly, it won't be more than few lines of code, yet can't discover which points to change ...

Much appreciated fellows, I trust it can be settled and imparted for all individuals, its stunning to have such free open source tool accessible !!!

The script name is Twando (www.twando.com)
