Thread: [How to rip a Website \(Easy Program\)](#)

St?Ik?r - March 20, 2015, 11:26 am

Hello Guys,

this is my first thread at hackforums and hope this can be usefull for you. What can I do with this program? Well you can easily enter a URL and the program downloads the complete website.

Example of a ripped website

Spoiler [\(Click to View\)](#)

What is the program called? Its called DarcyRipper and can be found [HERE](#) ?

How to use it

1. Start the DarcyRipper.jar and press "Create new"
2. Enter a Name for example "Hackforums Website"
3. Enter the url in the URL(s) box
4. Select a "Save Path" of you choise
5. Now you can change some settings for example Parallel Downloads etc
6. After all those steps above press "OK"
7. Press now the "Start" button in the control line
8. Wait till its done and you ripped succesfull your first website

Thehackerguy1 - March 20, 2015, 11:28 am

Thanks OP, i will test and tell if it is safe to use.

You can rip any website off just by copying the code when pressing f12.

Yeah good luck with that.

OP: I prefer WinHTTrack. Fast and always does the job

Thehackerguy1 - March 20, 2015, 11:32 am

It is Legit, thanks for this op. BTW this is .jar file.

Thats true but the programm is much faster. Depends if you like manual work or programs ?

flixi - March 20, 2015, 11:32 am

sure you can. Can i get the .conf files too with this shit

?ULL - March 20, 2015, 11:34 am

The only problem is you cant grab php files, this ripper is faster then the other ones i have used though.

Lol, OP said the program is for ripping websites (which included files), you're saying "source code" lol

Btw thx OP for sharing this, im not a web developer or something like that but this might come in handy one day. ?

<.< Eh yes you can rip .php files?

So many false statements in this thread. It's disturbing.

Adium - March 20, 2015, 11:51 am

I think most of us would stick with wget.

I heard of wget but never tested it after some searching I found this program and found it very usefull

Crory - March 20, 2015, 12:19 pm

Wow thanks mate this is an HQ thread luv it <3

Soliness - March 20, 2015, 12:21 pm

HTTrack is also a good alternative, I used it for a project and it worked like a charm

shizzl3r - March 21, 2015, 2:15 am

nice programme, thanks will come in handy.

ale12386 - March 21, 2015, 2:19 am

I will try this. Hope this works! Thanks man!

No you cannot unless the php code are published. PHP is a server-side language. Please enlighten me how you would go and steal the PHP source code without having any form of access to the server.

zazen0 - March 21, 2015, 8:47 am

Great program -works better than Teleport Pro...thanks!

HaxOr? - March 21, 2015, 11:20 am

I'm just loling at the guys saying that PHP can be ripped. I would want source file of Facebook if possible. Thanks :)

Obviously it is possible to rip files with the .php extension not the actual php code as it is server side and html, css, javascript is client side.
