Thread: [HELP: Skype resolver API?](#)

**Jcgob** - March 20, 2015, 3:26 pm

Hey guys, I need a Skype resolver API for my code. Something like:

[www.example.com/args=username](http://www.example.com/args=username)

and "example.com" will return the address, all I need to do is download the string.

There are more then enough free resolvers available on the internet, just google. Further, I'm sure people here will offer the source code

I searched, and searched, and searched. Went on second page of google. It needs to be an API
