Well, that's what happens when you set your multiplier to 10x :P

I've been able to easily get 8X the coins that I deposit with a 2X multiplier. You must have just had back luck.

Good job Abraham, hopefully I will win some OMC ?

To be honest, the site itself won over 15000 OMC.

I have lost 1800 today due to a bad setup I had, but before that I won 400 OMC easily.

Sent 1k to another address and didn't win once with a 5x multiplier either. Just not going to touch it anymore because it's not fun and not worth, this is why I don't gamble irl either.

Abraham Lincoln - March 21, 2015, 10:34 am

I'm going to enable the free OMC feature in a bit. Basically you get a small amount of OMC free every hour so you can gamble for fun.

Server is running a bit slow due to all the load. I'm disabling chat for now to help with the load.

For anyone wondering, uptime:

14:01:46 up 3 min, 1 user, load average: 71.65, 31.79, 12.09

SHIFT? - March 21, 2015, 12:19 pm

The site is now back up!

Due to the crazy load that was being put on the server I've had to disable some features and tame some others down.

Chat is disabled, the auto betting bot has been set to a delay of 1 second (instead of .5 seconds) between bets, and regular betting has been put on a delay of 1 second (instead of .5 seconds) between bets.

Hopefully we don't crash the server this time :)

Just some feedback that I've come up with so far:

The site works great overall, but lacks the speed needed when loading things like recent bets. This

basically causes bets to overlap, causing the previous bet to display as the second one is being made.

What I would suggest is using separate servers for the frontend and the backend. For instance, 1 server is dedicated to MySQL operations, and the other is dedicated to serving the frontend.

Overall, great job on this. I hope to see improvements as time goes on. :)

Thanks for the suggestions.

The script I'm running isn't made by me and has a lot of issues. I've fixed all the security related ones, but as you've said, there are a lot of performance / ui issues.

The overlapping bets was just a matter of an SQL query without proper ordering. It's fixed now.

I probably won't be making any major changes to the current site as it is. It's just too much work. But new things are in the works :)

Not sure if you've noticed or not, but the site is being extremely slow at the moment. Automatic betting actually stops sending bets all together.

PM me, I may be able to help you out. Most likely a problem with your config.

Abraham Lincoln - March 21, 2015, 8:58 pm

Well, after some searching I've been able to locate the source of the instability: The gambling script.

Each user generates a minimum of 1 request per second. When using the automatic betting bot, there are 3 requests per second. With enough users, this becomes a very significant load. Even with the casino disabled the server is getting 300+ requests per second.

Because I'm running Apache, the server is taking a beating. It's basically a DDOS on itself.

I've modified the casino scripts to hopefully reduce the load to an acceptable level.

If you have the casino page loaded please refresh the page.

Manny - March 21, 2015, 9:00 pm

Hopefully the site gets back up soon so I can play a little :).

Abraham Lincoln - March 21, 2015, 9:03 pm

Up to 550+ requests per second. That's absolutely insane.

You should do what I do for my gambling script. Every time you press roll, disregard the 2 second, and update anyway. So there is two ways to update.

1. every 2 secs
2. every roll you do

Won 900 this evening, but that was a few hours ago, maybe you could ask some people to donate? Because you're losing a lot I guess.

I threw in 1.5K earlier and will be putting 10.5K in shortly. I think that's enough for now.

What about an invest feature ? Just an idea, could possible make OMC interesting for more people.

Rolls Royce Cars - March 31, 2015, 9:38 am

I sent 10k OMC to my wallet an hour ago, didn't received it yet, last block was 1 minute ago. Any ideas what it could be?

EDIT: Just received it!

Haha, that's awesome. You might as well just gamble it even more and try to win bigger ?

Are you using coindice version 5?

Just want to know what version of it youre using

Yoshi - March 31, 2015, 10:11 am

Lets throw in some OMC and use ma poker face.

I'm using a custom build that I made. I don't know what build it's based on.

It doesn't have an investment feature though, so I'd assume it's not v5

Yoshi - March 31, 2015, 1:54 pm

Just got back eh from a gambling session... Lost all my OMC(3K) ?

I'll see if I can get one added soon.

For anyone having issues with deposits, only one deposit is processed at a time. If you send multiple deposits to your deposit address, only 1 will appear at a time. Once the first one processes, the next one will begin processing.

Not trying to call you out on anything but I run 6 dice sites for multiple cryptos and you seem to have nothing really *custom on your build. Looks like like all others. Only difference is you are using the omnicoin thats it.

Mind elaborating what are the custom build features you added? I talk to johnny on the daily basis and I have meet and have him told me many people use his script and claim they made the build themselves etc. I just really want to know what have you done that made it a *custom build?

Only thing I see different is as i already stated you using the omicoin for the currency thats it. As for giving people free coins thats already a option in the script but you are telling people you are adding that when that feature already is added to the dicing site.

Also if you dont have the latest version (5.0) then what is preventing people form using the exploit that makes them auto win? (Which was fixed on 5.0)

No bashing meant towards you I just want to make sure you run something very secure.

I don't mean custom build as in I added in new features. I meant I went in and recoded a decent amount of the backend to make it more secure and reliable.

There were quite a few exploits I found myself and got patched up.

When I was working on the backend, I never did any work on the giveaway feature, and so it wasn't functional. I was going to have to go in and recode it to get it working.

As there have been many bugs in the script and since I don't follow the script development at all, I'm not familiar with what the bug that was patched in 5.0 was, or if it is even prevalent after the work I did. If you could elaborate I'd appreciate it.

Looks like there is another casino now, this is not the only one now.

Guess I'll give it a try and make my own blackjack casino.

It's up for me :)

Every once in awhile it has a little bit of lag, but it usually resolves itself in a few minutes.

Give it a refresh and it should be back. Every couple of requests 504 where there is a lot of load.

Fixed the sorting on the High rollers page. Bets are now actually sorted from highest to lowest.
