So... where's the source? I believe you forgot something lol.

Oh you just edited your post, alright.

What does it do? Some explanation or pictures would be nice if you release something.

Thehackerguy1 - March 22, 2015, 4:20 am

You forgot the source code i guess. Edit it.

The download is the project itself. I'm currently looking at around 65 webbrowsers that will open the URL you enter. Lol.

crunchbang - March 22, 2015, 5:29 am

It will not pass the 301 views for sure and I will not use in my own videos

nuk - March 22, 2015, 8:53 am

Oh my lawdy... well you did say it was your first project so

Sutton2k9 - March 22, 2015, 1:38 pm

Funny thing is you could make the same project in 5 lines of code and it would be far more efficient

Thehackerguy1 - March 23, 2015, 1:22 am

He told me he downloads sources from a forum called as vermillion and then takes codes an makes them in .net and takes the credit to himself. I saw in his join.me stream he has more than 200 leaked sources.

Stop lying , i saw more than 150 sources in join.me stream and then you opened project files and said i will edit codes and make them in my name and credits too.

You have more than 100 source codes. Dumb.

This.

A single for/while/do until loop and this could be written in less than a minu-- no forget that, this could be written in a few seconds.

OP calls himself a hacker after he made this project.

Is it popular? ? it is VERY popular among "L44t anonymouse innoxent hexor" kids.

This is the ugliest code i have ever seen, sorry but you should really learn the basics before doing stuff like this and thinking you are "The Hacker".
