You can delete all data on hard disk drive (HDD) with diskpart clean all command you can start the Command Prompt by pressing Shift + F10 keys at same time and follow the instruction to use clean all diskpart command from Command Prompt at SevenForums website. Next time open help thread at [Microsoft Windows, XP, Vista, and Windows 7](#) for Windows OS related questions.

"Windows 7: Disk - Clean and Clean All with Diskpart Command"

<http://www.sevenforums.com/tutorials/52129-disk-clean-clean-all-diskpart-command.html>

You could use Hiren's bootable USB, it's insanely easy to make.

During OS installation process, you will be given an option to format detected drives.

Mr. Dr. Prof. Patrick - March 22, 2015, 8:42 am

you never actually empty your hddisk, you simply tell it.. all your data is disposable now overwrite whatever you want,

but you can completely delete everything during OS installation
