Thread: [Preffered Protection Against Infected USB DRIVE](#)

acidburn123 - March 23, 2015, 5:59 am

What program except anti viruses like eset that can detect high virus rate inside the usb and can prevent auto running viruses. Can you provide what are you using.

Without using sandbox or Linux OS.

What is your advice for me?

Absolute Greatest - March 23, 2015, 6:01 am

Why not just use anti viruses? Also, why not run it in sand box?

Not all anti virus can detect it, but what I'm finding is auto detect each time i plug the flash drive it will to an auto scan. Something like that.

because its my sisters laptop and I find it hard to teach her something like sandbox. I mean its too technical for her. One time she panicked because her usb hid all the files.

Well as long as she has a operating system higher than windows 7, There is no auto run for USB'S, Unless rubber ducky i guess, Just plug all the USB then she can't use them.
