GenericSkid - March 23, 2015, 8:36 pm

Why do people still use darkcomet? It's 2015 people. Get something that doesn't get detected even with the best crypter on the market.

Young Nino - March 23, 2015, 8:51 pm

Cracked up looking at the behavioral , first he tried using cyber ghost to hide his IP , then he realized you can't port forward with it so went back to being a skrub

I think Microsoft has some type of contract with No-IP because of the use of malware with No-IP.
