n0\$3ratu\$ - March 24, 2015, 10:38 am

ETHEREUM is now accepted!!!

For peoples who is going to purchase six months package I will upgrade them to 3PIC.
For those who is going to purchase lifetime package I will upgrade them to L33T & 3PIC..

This is the only skype I have and none other!!!
If you fall for scammers then is YOUR fault and YOUR fault alone!!!

All BTC and ETH payments will be processed manually.
To receive the BTC/ETH address please pm me or send me a email to:
[email=dataprotector2016@gmail.com]dataprotector2016@gmail.com[/email]

If you are using Hawkeye products then please stop contacting me about purchasing or support.
Those are the most shitty products ever made and sold on HF.

crazyycast13 - March 24, 2015, 10:52 am

Just remember to not directly offer your crypter when responding to threads that ask about crypters.
Just say tell them to look at the stickies for crypters that support xyz.

Other than that, GLWS

Using this cryptor for a long time. It remains the best one for my needs among others I tried on this forum.

immortalwon - March 30, 2015, 7:33 am

Do not use this anymore but started off with this crypt after first trying bytecrypter a long time ago. Nothing but high quality crypts and fast updates. I always recommend people to use this. This crypter and darkeye is the top crypters on hf, no questions asked.

s??l?s? - March 30, 2015, 5:24 pm

my questions:

- 1- what about webroot antivirus, did you tested the crypter with it?
- 2- when the crypter goes detectable will the update be instant?

Thanks

sorry i intend to buy 90 days subscription not 45 days. just need to know about webroot internet security whether your crypter can bypass it. I cannot pm you as i have no 25 posts and i want to buy it through western union.

I am a customer Of Data Protector from Much Time is I want to release my Vouch for this product for its creator:

I want to say right away that it is a great n0\$f3ratu\$ Coder with a lot of experience and knows what he does when encoding software ..

Also always provides great support for all its customers, in case of problem always has a solution.

DataProtector crypters is a very powerful reliable, after many tests on various systems can say that until today is absolutely the best crypters I purchased. The encrypted file has 99.99% successful execution, persistence is very powerful is able to bypass all the best in runtime Antivirus, including Kaspersky Antivirus and Internet Security 2015. Also works with all newer RAT, Keylogger, Etc ...

This is a product of high quality for customers with special needs!

Do not waste your money more with poor quality products, if you are looking for an excellent crypters then you have to buy DataProtector.

Try it You will not regret this purchase ... !!!!

I wish you good sale in this great Coder ...

(NB. I apologize in advance for any errors of grammar, I do not speak English)

Hey bro, looks like a great stable crypter! I may purchase this but I was wondering... will you ever accept Paypal or such as a payment method?! Maybe Amazon GC? Cause someone else selling a crypter is offering that kind of payment! I'm not sure how to pay with bitcoin so I prefer one of those two payments! Thanks!!

I have used data protector version 1 around 1.5 years back. It was amazing, except for the fact that it had .Net dependency. Which was kinda okay. The crypter itself was amazing. Didn't have a single detection for the entire period I had it with me. Great guy. :)

Seller - May 19, 2015, 3:18 pm

This is literally the best crypter on hf, here's a free for you n0\$f3ratu\$

Don't hesitate to purchase it,you won't regret!

Does anybody here know a good uploading site where I can upload my crypted file for people to download that doesn't distribute to AV companies? I've been looking around on HF and found some posts about it but everyone had different opinions on which one was best and the posts were made 2 or 3 yrs ago so I need some new updates on the latest safe uploading sites. If anybody has uploaded their crypted files before without a problem please tell me the name of that site or send me the link. Just trying to keep my file FUD so please help me on this. Thanks!!

Vouch fo Crypter. I don't RAT anymore but I'm not surprised that even after 3 years of joining DataProtector is still going strong while I don't remember any competitors from years before that have quality crypters like this. Vouch Again!

hellotoeveryone - July 1, 2015, 12:15 pm

I'm with this guy for almost a year now. This crypter always works just as it should which I can't say about some other's I've tried here before.

@n0\$f3ratu\$ whas your price for 3 months?

n0\$f3ratu\$ - July 4, 2015, 10:08 am

Just to let you know i added two more injections which are compatible with both NET / native assemblies, so from now on you are not obliged to use injection in it self for NET assemblies anymore.

Thank you skin seller for bringing this matter to my attention.

Data protector is a very good product. It had me running back again for a renewal, best Crypter around town.

AyoltzDox - July 4, 2015, 11:55 am

I think i remember this one from a while back being very good. i think it was ByteCrypter that sucked because it always had detections. Looking to buying a crypter , this one good ?

IAmA-GOAT - July 7, 2015, 3:56 am

Crypter is simply the best.

Nosferatus provides excellent support, always listens to my concerns, and very fast refuds.

What are you talking about????

I see what you mean.
The crypter is crashing because your license is banned.

Hello n0\$f3ratu\$,

I think it would benefit everybody (customers and yourself) if you performed a runtime test with refud.me: <http://refud.me/run.php>

By doing so you would attract more customers, and keeping customers satisfied.

Hello n0\$f3ratu\$,

is it possible to get a 2 hour trial version of your crypter? I already bought 2 different Crypters (CloudCrypter and Abyss) and none of them could get me runtime FUD for Bitdefender. Its all good on scantime but not runtime. I dont want to purchase another crypter until im sure it works runtime (Im using LL). Thanks for your time.

i have used data protector,and i vouch for it...i will buy this thing again with my closed eyes,whenever i will need crypting.. ?

arsenel - September 1, 2015, 5:58 am

I can say i have used almost all major crypters in this forum since last 2 years.

I had stopped using dataprotector just cos paypal wasnt a pay option anymore. Now i see it was a big mistake.

I payed 4 crypters last month which they all say they are fud. 2/34 or 1/34 isnt fud for me. and the worst thing was even if they dont get caught in scantime they got caught in run time.

I have never had this problem with dataprotector. Now i bought again and im excited to use it. Currently im having a problem opening it (which is most probably caused by my system) and nos. is helping me to figure it out.

So a big vouch for the best crypter of this forum.

Anonimox - September 1, 2015, 10:04 pm

i dude, i wanna ur crypter , do u acctpt paypal ?

thanks

arsenel - September 2, 2015, 12:53 am

Now i could start to use it again.

Thanks very much n0\$f3ratu\$

I guess he coded the crypter to work in my system :)

He had a tv session for over 1 hour just to solve my problem.

And the output hasn't surprised me. 0/35 and bypasses the eset proactive
Definitely the best crypter in HF and the owner is a great guy.

Believe me don't look for another crypter if you want a high quality crypter and if you don't want any problems.

Hi n0\$f3ratu\$,

I am interested in buying your crypter, I would just first like to find out if you offer a 1 or 2 day license for me to be able to test your crypter before buying a full package?

I have tried quite a few crypters and many of them don't do runtime FUD, and I believe yours does this well. I have only read good reviews of your product. How often do you refund it?

Please PM me, and also send me your bitcoin payment details.

Thank you

There is nothing to fix.

Email providers like gmail DON'T ALLOW executable files to get attached.

I hope none of the email providers will ever allow that.

How good is your randomisation engine? I have been fascinated by it for a while. I am not a customer by the way, I just know that this crypter implements a randomisation engine and most developers aren't very good with randomisation, however DataProtector is a really good and popular crypter so it has made me fascinated.

Any more info would be amazing. PM me if you are willing ?

Crypter works great with Nanocore.

Just use Regasm, Startup with crypter (and not Nanocore) and Pump the file >10Mo and bypass all AV. In option you can use basic cloning.

please reach out, I have BTC in wallet ready to pay.

Can provide you my old lic usernames if needed

I know I am probably going to get a really mean asshole remark for commenting this again because it is your nature, or maybe you are just overly blunt

but I want to buy the crypter again,

I dont care what any fucking scrubs on these forums say n0\$f3ratu\$ is a fucking legend on here and should be given a fucking golden carpet to fly around on, this guy is fucking superb when it

comes to crypting or whatever the fuck you call it,

anyways get in touch, no other crypter on this site can even try to compare to the fucking pure godliness of n0\$f3ratu\$ work, anyone who would try to compete with his crypter would only be shitting on themselves.

every other crypter creator needs to take lessons and notes, cause all other crypters are little pesky bitches compared to n0\$f3ratu\$ crypter

I don't recommend this AT ALL.

I got this before,opened it got my computer RATTED instantly.[Thought it was safe so i opened it without thinking]

I had to make a new windows. and stopped using crypters for a while.

Maybe it was not a RAT but the computer was fucked badly with viruses and stuff...

I am sorry if I am not "1337" enough for your business. I will take my business elsewhere. I used a few free crypters up to this point and wanted to get in the premium model to get as close to FUD as

possible. None of my free crypters had a binding feature. So while I had an idea what it could be I just wanted to make sure before actually buying the product. Again, support is half the deal and you lost me by how you handled this. I am sure you have enough all knowing experienced people buying your product so I am no loss. But I just want to warn anyone out there that, if you are new to this and have honest questions, do not bother.

Alright guys just a heads up so you don't ever say you haven't been warned.

So far 5 peoples have been banned for scanning on virustotal.com.

This happen in less then 2 days.

PLEASE trust me when i say... if you scan on the forbidden site I will know!!!

1. Hey moron you scanned your file immediately after crypting so there is NO WAY someone else got access to it.

2. On skype you told me it was your brother and NOT your "friend".

3. License sharing means a big F*** Y** fromme to you!

Who else doesn't like my basic rules is free to stop using DP, but as long as you (the customer or potential customer) want to use DP then you MUST follow my rules or your licenses will be bye bye.

I am expecting more banned idiots to come here and cry. ?

Please be aware and stay away from Skype id: data.protector2.

Please notice the last "dot" after protector2.

That is a scammer impersonating me.

The ONLY correct skype is data.protector2 without any last dots and with a SINGLE dot between data and protector2.

I hope this time i made my self perfectly clear.

Not only does your crypter have the best FUD times on this forum, but you also don't have to KILL yourself trying to find icons and a lot of bullshit to achieve true runtime FUD and you prove it on the thread and I can prove it too. A lot of the crypters on this forum make you work so hard and configure and configure and configure till you feel like choking someone to achieve FUD. I'm really happy I've been a customer for 3 years.

YES is fud for major av's.

Tested multiple times.

Runtime FUD depends on which rat / logger you are using.

Precisio? - January 25, 2016, 10:36 am

Just bought this amazing and powerful crypter again, have to leave a big vouch for this awesome product.

Honestly it's better than past, improved!

sammy3331 - January 25, 2016, 3:18 pm

can you try to reply me on skype?

ibidado - January 26, 2016, 12:16 am

hello bro you blocked me from your skype, can you please add me back i want to buy crypter.

bro reply back on skype ive been trying to contact you thru there, but i guess u have blocked me on skype.

onyemmatruth - January 26, 2016, 9:57 am

Why do you always block people on skype, if you keep vouching for your crypter then stop blocking your clients on skype. and respond to their msgs.

Kenzoo187 - January 26, 2016, 11:37 am

Is this working with Netwire Rat and can u tell me a good keylogger that is compatible to ur crypter

thx

I personally think it worth the price because it is by far the greatest crypter I have seen (all fucntions working good, have many great tools, longer fud, never break my file). I am sure n0\$f3ratu\$ put tons of efforts to make sure it is fud everyday. I don't want to comment the comparison with other crypters but one thing I know is I am 100% satisfy with this crypter that all things work out good - that's the only thing I need.

Bro if I crypt a 38kb file with your crypter, what size will my stub be after crypting??

simmshade - March 15, 2016, 4:45 am

call me stupid or s1 with low reputation but my definition of a crypter are these and Data protector ain't got it.

Able to Crypt ".exe" or ".dll"

- Builder Language: VB6 with InLineASM
- Able to Crypt Most Native Application
- Able to Crypt VB.NET / C# Application
- Private RunPE (Coded in ASM)
- Full Unicode Support
- Supports x86 & x64
- RC4 Encryption
- EOF Support
- 10 Custom Injections
- 9 Resources types with Flag Control
- Treat Section as Relocation or Debug
- Icon changer from File or Custom Icon
- Version Info Cloner (.exe | .dll | .ocx)
- Delay Execution

- Code Complexity
- Pre Mutation Code
- Compatibility Mode
- Two Calling Methods
- Multi Storage Methods.
- Server Sided Anti Sonar
- Able to Create New Section
- Anti VMware
- Realign PE
- Startup
- UPX Compression
- Free Scan4you Scanner
- File Pumper 1kb-10000kb
- Null All or Last Section Name
- Skids spoof extension crap
- Binder with an option to run only once
- Delay execution til' next restart

Hey guys.

Last night we got some nasty detection's from bullguard and others that are using the same engine. Unfortunately to bypass it for the moment i had to make a compromise by sacrificing the size and the structure of the stub.

Hopefully this is just a temp measure until i will get some extra free time.

I hope you can understand.

Have a great day all of you.

you are correct i did have multiple accounts. My original one was mattwiler, which was a paid account and was closed due to inactivity which i think is a little messed up since i paid for it but it wasnt a problem i was willing to pay for another account because it is worth it. This place is great and the people here are trustworthy but the problem is i couldnt figure out a way to get the admin to send me a payment link until this account and was finally able to have a solid account. I do not know what else to say as thats the truth and I am sorry that you gave me negative rep for this but I do want your services and be apart of this community in a positive manner. is their anyway we can work this out so we can work together?

the only reason i posted this here is bc you wouldnt allow me to send pms and deleted me off skype so i am sorry if it offends you but please lets work this out.

Yes there is.

Fix your accounts by talking to one of the admins.

Then come back and i will remove the current rep.

Then will be able to continue what we started.

Have a great day. ?

***** JIT Debugging *****

To enable just-in-time (JIT) debugging, the .config file for this application or computer (machine.config) must have the jitDebugging value set in the system.windows.forms section. The application must also be compiled with debugging enabled.

For example:

```
<configuration>
  <system.windows.forms jitDebugging="true" />
</configuration>
```

When JIT debugging is enabled, any unhandled exception will be sent to the JIT debugger registered on the computer rather than be handled by this dialog box.

This criptor I use with luminosity. My first license was 45 days. Now I use the license for 90 days.
This is the best that I have used before. Now just this product and not something else. Very pleased
with the constant updates. Also on Skype has received aid in good settings with my rat and other
questions were answered. For those who wrote that poor support: do not ask stupid questions and
everything will be fine. I am happy that I use this product. Sorry for my bad English.

Is this for free? No.

You make money on this? Yes.

So why you being an ass for a question like this? You as the vendor could easily answer this and have anothe potential customer but if your product is as bad as your CS, then Ill better buy somewhere else mate. I don't have time to read through 82 pages here for a question which is very basic for you to answer.

Hey mate, if we are to consider the quality that comes with this crypter, one would agree that it is under priced. Yes, you can spend your hard earned money on it but this should not blind you or any one that for the efforts the developer puts in to keep it FUD can be compared to the small fee he charges.

That said, I've personally used DATA protector with LL and it all works fine if you get the settings right. Send me a PM if you want me to share with you my detailed configuration guide.

Threshold - April 11, 2016, 1:45 pm

No the quality of the product isn't as bad as the customer support.. But I guess the coder doesn't have a lot of free time. And for less than 1\$ a day it's a very good crypter.

I truly don't mind spending top dollar for top product. It's the vendor's decision to either sell cheap and make money by bulk sales (chinese way) or sell expensive, sells less but make money by less sales as more expensive product (german way) :)

Thanks for your reply, will purchase it.

Indeed you have no idea how busy I am.

I barely sleep few hours per night.

You must realize everything I do, I am doing it alone.

Beside selling, customers, refunding I still have to attend to my daily things, family, ect.

So if you find my support bad then is really nothing I can do.

I will help peoples with serious problems, however I will not lose time helping peoples who are asking me where the crypt button is.

Have a great day. ?

I have the same problem.

Its weird because i only get systems without AV's as well.

And yeah he is a multi, so am i, because elseways your gonna ban us from your crypter.

Im with you since n0\$scrypter was around and i gotta say now, this crypter isnt worth it.

You ask proof? Instead you should check it for yourself, your using bypass vids from the start of your crypter... You never update that. And even tho i cant know if you do, you dont. I didnt get a AV-having system this whole month because your crypter doesnt bypass, even tho it does maybe bypass 1/10 times its not quality anymore.

You should check your runtime and bypasses everytime you update. Because there is something wrong and i cant point out what it is.

N0s your gonna remove this post somehow but i ask you to fix your shit, back in the days this was 100 times better. Now its stable for non AV having pc, but other than that nah.

Hope you work out something and dont sit on ur ass, and just work. Because this crypter isnt worth it atm. (NOT NEAR ANY HQNESS IT HADBEFORE)

1. LL correct version is 1.5.
2. Will NOT work in sandboxie but you can test on vmware.
3. YES will work with those settings.
4. Before anything when you TEST SOMETHING if you didn't knew FIRST test on 127.0.0.1. That way you will know for sure if you have a connection problem or not... Anyway this was tested probably more then you can imagine and is working just fine.

I have a couple questions before I purchase your crypter.

1. Does it bypass runtime on AVG as most crypters are not runtime fud with AVG?(asked this question because there was no video showcasing AVG bypass and the link you posted before this post does not show avg bypass).

2. I understand that this is compatible with Luminosity but can I use the startup on Luminosity instead of the one on the crypter?

Thank you for your time.

1. Using the same crypted file sometimes it does, sometimes doesn't (don't ask me why...), but just to be on the safe side is better to assume it doesn't.

Anyway if you plan to spread using cheats or something similar you can be damn sure that then end user will have his av disabled.(just my thoughts)

2. Yes you can.

n0\$f3ratu\$ - June 11, 2016, 3:19 am

Log changes!

Startup customization.

- *Custom folder

- *Custom startup name

- *Custom registry key startup

- *Default registry key

No more two files for registry and file persistence,
however in task manager will be two processes with the same name,
so be careful how you name your startup file.

Fixed and improved anti sandboxie and anti virtual environment.

New gui (just because i was bored from the last one)

Soon to come more bug fixes and improvements.

Tested the crypted file (nanocore) against kaspersky, avira, avg, avast and norton.

Bypass kaspersky, avira and avast.

Strictly as a file and startup I bypassed norton, BUT unfortunately is detecting the traffic.

(You can download the Norton Security Deluxe version and test your self if you don't believe me)

Unfortunately I couldn't bypass AVG with startup enabled. :(

I will keep try, but no promisses.

That is pretty much all.

Thank you for your patience.

All major av's, except.....

Norton is NOT detecting the file, but the traffic and the Chinese av 360 because the file is new is asking for user permission for adding to startup (doesn't matter if you going to use regedit or startup folder or task scheduler)

I have a complain to make..I think scammers has created skype id defrauding people. I was one of the victim yesterday..i saw about three same skype username in which i added this Data Protector Hackforums. we started discussing about the product and function, which i later paid to the pm information given (U10436275) i transferred 35pm for 45 days. He gave me a stub and product key (DHASF-45DGF-A1F67). When i click on the data protector he gave me..Nothing up..I tried it six times before i wrote him on skype to complain. He said maybe one of my program is blocking it..Till now the guy stopped writing me..I think he gave me virus instead of data protector..Please advise me on how to get rid of the virus he gave me because i have been looking for a way to remove d virus from my system.

1. Is your fault for all that happen to you.
 2. My skype is big on the first page on the main post.
All you had to do was to click that button.
 3. Before making any deals ALWAYS check through PM or if you can't pm by posting in the thread and waiting for answer from me.
 4. I can't help you as I don't know with what you were infected.
 5. If you are infected he probably already has everything that he need it from you.
 6. The best thing you can do is to format 100% all your drives and reinstall windows.

Have a nice day. ?Depends on which version will you take (depends on your spreading method if you going to be accepted or not)..

The one which is sold to general users has nothing to do with vpn, but the one which has only few users has a country and spreading restriction.

Also while DP will run vpn will be disabled.

After crypting you can re enable the vpn.

In the very first post of this thread, he has provided his skype ID: data.protector2 which you can use to add him and proceed with purchasing the crypter. Make sure you add the right guy since there are lots of impostors around.

The Pesistance feature of this Crypter makes it the best among any crypter I have come across over the years.

Do NOT test on yourself if you dont want to have an encounter with one of the most 'powerful' pesistance out there ?

Although the KillApp can do the tricks but you have been warned ?

Marxua - September 4, 2016, 3:04 pm

Hello n0\$f3ratu\$,

your crypter is actually FUD ?

Exzib - September 6, 2016, 5:26 am

I don't often take time to vouch for stuff on hackforums because I am not always happy with what I paid for, but when it comes to DataProtector, I got exactly what I paid for.

Note before you read that I am using a private version of dataprotector.

I just got back to these kind of stuff after a long break, so in the beginning I had some issues getting up and running, I was having issues getting the file FUD, but this was completely wrong from my end, dataprotector helped me in skype and teamviewer to get the file fud and told me what settings to use to maximize the usage of this amazing crypter.

Back in the days, I used a crypter that was called something with data aswell, I honestly don't remember what it was named, but I remember how expensive it was and how amazing the crypter

was because all the features that were explained in the sales thread worked just as described.
This was back before the drama with blackshades.

Anyway, since then I have done a few hacking sessions now and then using random crypters every month but nothing was as it was back then, but I got to say that this is exactly, what that was back then.

Every single features is working perfectly, the persistence, the anti VM and sandboxie, it all works and not only that, it is fully FUD and it bypasses every AV I have tried it on.

I am totally amazed by this product and I know for sure that whenever my license runs out, I will buy lifetime.

Huge vouch for OP, amazing product, if you want to get serious about crypting your file, it doesn't get more serious than this.

Sad to see that hf does accept this kind of behaviour. From my previous experience with this soft I have to say it's not ideal, and you can forget about runtime FUD -> this crypter didn't stand a chance with major AVs.

Peoples who knows what are doing doesn't care about my personality.

They are looking at the product quality, not at the way I am.

On the other hand there are peoples like you and the other idiot.

Notice "the other"!!!!

Just so we clear so all the others don't have the urge to post anymore about me.

1. I am an asshole... with stupid peoples.

2. I don't care about any of you, this is strictly business and I am sure this applies the other way around.

3. All of you who are complaining that I treat you like shit, then STOP talking to me.

If you want to purchase you don't have to do small talk with me and/or ask stupid questions.

You added me on skype from multiple accounts trying to convince me that is NOT your fault.

I genuinely think is NOT your fault regarding the creation of the voucher, but I do believe you sent it to someone else not just me.

how do I get this.... its really dope

lori Yagami - November 6, 2016, 5:35 am

i used the crypter loong time and yes its one of the best .

Vouch for the cryptor and the owner.

karim.azzi - November 7, 2016, 9:10 am

All potential buyers, be aware.

You can't use DataProtector inside a Virtual Machine (like VMware Workstation).

LastSession - November 7, 2016, 10:46 am

(Nov 7, 2016 10:10 AM)karim.azzi Wrote: [\[CITE\]](#) All potential buyers, be aware.

I bought the product and used it a couple of days inside a Virtual Machine (as anyone should do...).

Then, one day, I run the program and a window pops up : "Virtual Machine detected. Bye,bye..."

And I can't use it anymore.

As the Terms of Service (TOS) of DataProtector mention it : "If you have problem then kindly PM ME".

That's what I did, kindly ask for a reason why I can't use the crypter anymore.

Nosferatu answered : "Your license was NOT locked [...]. Nobody can help you..."

Conclusion : I was ripped 35 USD.

Did you disable "Don't run in virtual machine".?

karim.azzi - November 7, 2016, 11:12 am

Quote:Did you disable "Don't run in virtual machine".?

Can you be more specific ?

For example, if I go to the .exe file properties, there is no such a thing as "do not run in a virtual machine".

I'm not referring to the RAT settings.

When I double click on DataProtector application (.exe), I sign in with NetSeal and then the not-so-funny message comes up... and I can't use the crypter anymore.

Veracrypt - November 7, 2016, 11:22 am

That was happening because you can't use the crypter inside VMware.

You can still use it on your main PC.

DataProtector supports native files.

Injection could be made into ItSelf if you plan to use your app settings or any other available injection if you plan to use crypter settings.

You can find my skype on the first page.

Just press the button and add me.

With the latest release of Nanocore 1.4 yesterday, former build settings does not work anymore. Do you have a working formula.

The former working one was :

NANOCORE : all defaults

DataProtector : Installation Enabled - Customer Reg Key - Install Directory : Any

Security : Compress Output + All 3 persistence

Compile Output : SELF

Thanks.

Will it work on all PC's running Win XP, Vista, 7,8,9,10 etc? or Is there a chance that some of these aren't supported? I have a very limited target to spread to, so I don't want to be hasty about it and alert them. :)

Stop asking stupid questions and use google to learn.It seems about a tleast 90% of OS have net 2.0 or higher

Windows Vista (all editions) includes the .NET Framework 2.0 and 3.0 as OS components 3.0 can be added or removed via the Programs and Fatures control panel.

Windows Vista SP1 (all editions) includes the .NET Framework 2.0 SP1 and 3.0 SP1 as OS components. 3.0 SP1 can be added or removed via the Programs and Features control panel.

Windows Server 2008 and Windows Server 2008 SP1 (all editions) includes the .NET Framework 2.0 SP1 and 3.0 SP1 as OS components. The .NET Framework 3.0 SP1 is not installed by default and must be added via the Programs and Features control panel though.

Windows Server 2008 SP2 (all editions) includes the .NET Framework 2.0 SP2 and 3.0 SP2 as OS components. The .NET Framework 3.0 SP2 is not installed by default and must be added via the Programs and Features control panel though.

Windows Server 2008 R2 (all editions) includes the .NET Framework 3.5.1 as an OS component. This means you will get the .NET Framework 2.0 SP2, 3.0 SP2 and 3.5 SP1 plus a few post 3.5 SP1 bug fixes. 3.0 SP2 and 3.5 SP1 can be added or removed via the Programs and Features control panel.

Windows 7 (all editions) includes the .NET Framework 3.5.1 as an OS component. This means you will get the .NET Framework 2.0 SP2, 3.0 SP2 and 3.5 SP1 plus a few post 3.5 SP1 bug fixes. 3.0 SP2 and 3.5 SP1 can be added or removed via the Programs and Features control panel.

Windows 8 (all editions) includes the .NET Framework 4.5 as an OS component, and it is installed by default. It also includes the .NET Framework 3.5 SP1 as an OS component that is not installed by default. The .NET Framework 3.5 SP1 can be added or removed via the Programs and Features control panel.

Windows 8.1 (all editions) includes the .NET Framework 4.5.1 as an OS component, and it is installed by default. It also includes the .NET Framework 3.5 SP1 as an OS component that is not installed by default. The .NET Framework 3.5 SP1 can be added or removed via the Programs and Features control panel.

Windows Server 2012 (all editions) includes the .NET Framework 4.5 as an OS component, and it is installed by default except in the Server Core configuration. It also includes the .NET Framework 3.5 SP1 as an OS component that is not installed by default. The .NET Framework 3.5 SP1 can be added or removed via the Server Manager.

Windows Server 2012 R2 (all editions) includes the .NET Framework 4.5.1 as an OS component,

and it is installed by default except in the Server Core configuration. It also includes the .NET Framework 3.5 SP1 as an OS component that is not installed by default. The .NET Framework 3.5 SP1 can be added or removed via the Server Manager.

Windows 10 (all editions) includes the .NET Framework 4.6 as an OS component, and it is installed by default. It also includes the .NET Framework 3.5 SP1 as an OS component that is not installed by default. The .NET Framework 3.5 SP1 can be added or removed via the Programs and Features control panel.

Windows 10 November 2015 Update (all editions) includes the .NET Framework 4.6.1 as an OS component, and it is installed by default. "Hello,

We regret to inform you that inbound traffic to dataprotector.io was blocked from a certain number of IP addresses. The mentioned measures were applied in order to cease a DDoS attack that was causing a considerable impact on the server performance.

FYI: DDoS (distributed denial-of-service) is a network attack against a particular machine (separate server or network) intended to cause service interruptions. The attack is usually performed via a high amount of simultaneous queries to a particular website or IP address.

The status of the attack will be checked by our Technical team in 24 hours and the block will be lifted in case of a successful outcome. We will inform you accordingly.

Your patience is highly appreciated."

Hi - I only need to encrypt a stub to use on one persons PC, which I have full access to - (I'll be installing windows for them and I want to install luminosity link).

Do I even need to use a crypter like this one?

And if I do, and I get the 1 month licence.. does that mean that after one month the stub wont work anymore?

Basically.. do I need to keep licencing the crypter for the stub to work? I just want to make one stub, put it on one PC.. use luminosity. That's it.

Thanks you everyone

I have a couple of questions. Apologies if they are obvious - I am a newbie.

Does the crypter have .NET support?

How long is the FUD?

Does it bypass MalwareBytes AV?

Can the stub be distributed remotely via without alerting the recipient?

I would like to use this with Gear KL, do you have any opinion on how they would work together?

Thanks very much - again apologies for any "obvious" questions.

Thank you.

That depends.. do you want to use startup from DP or from NW?
If you want to use NW settings then on DP use ONLY itself,
otherwise don't use anything in NW except the logger and everything else you need in DP.
Good luck.?

If the host is down ofcourse the crypter will NOT going to work.

Is nothing I can do about it.

The host went down 15 minutes ago since I am posting this.

Hopefully will be back up shortly.

As far as I know they are moving to a different platform.

You me sendings a link to pay your crypter . I follow the link and I pay your 45 days package and on Skype instead of delivering him to me, you offend me in spite of all the captures that I showed you.

Give negative notes but pays off my BTC. you are real shit, scammer who takes itself for a god because of your mess to code. You are not ashamed. When we want not of a customer, we return his bitcoins

The guy sends you a link to pay dataprotector as if the crypter has no official website. We follow the link which contains a link BTC to pay to code him . The transaction was completed, I return to him for the activation. He asks me for all the proofs which I send and the guy disputes the transaction. I am French and I send you all proofs you need . You are impolite and it's time that somebody puts you back in place to you on this site. You have no respect for your customers. You can steal as one decay . But everybody will know whom you are when I shall have finished it with you...

And it was so predictable of you to give me a negative reputation. I don't use this site often, but damn are you kids predictable.

Again, I'll discourage everyone buying from this seller. Condescending, poor selling skills, and a bunch of previous complaints are self explanatory of his bad traits. Don't get cheated by his fake advertisements which he may ask other uber friends of his to relay out.

None of the users that complain knew what the fuck they were doing or talk about.

Maybe I have my minuses, but I am selling for the past few years.

The complains vs satisfied users are so small that is not even worth talking about them.

Now please go back to the site you are using "often".

Nobody here is holding you back.

i would like to buy this, what are the prices? whats the best price for one month ? and whats the best price for lifetime ? please PM OP.

chalaji080 - May 15, 2017, 3:15 pm

pls can somebody help. dataprotector has not worked for me since I bought it. I don't know if I'm doing some settings wrong. I'm using it on im5. I disable everything on im5 and enable startup on dataprotector. but the crypted file does not work. I tested in another of my pc but it's not showing up in im5. but if I test without crypting it shows up. what might be the cause? need somebody's help. help without insulting.

NetSeal is officially down.

I / we didn't knew this..

@debug modified his thread just two hours ago (from June 1st to TODAY) because of personal issues.

<https://hackforums.net/showthread.php?tid=5594772>

Please don't worry, in few days we will be back up.

THANK YOU for understanding.

Until we are open again please remember to send us the following to

[email=datap@protonmail.com]datap@protonmail.com[/email] :

1. Your net seal username.
2. Your hf profile link.

3. Payment details: BTC tx info or IF you used PM the voucher number.

4. Your email address.

If you don't send me ALL the details above, I WILL NOT going to be able to identify and give you a new license with the remaining days.

I recommend this crypter, the product is amazing overall, the support, best support I've ever had, the price on this crypter for what you're actually getting is a steal!

This crypter has been on the market for over 2 years now, and it's absolutely understandable that with this quality of a product, it must go on.

Hello, I have been trying to communicate with you about an issue i have with my DP account on skype. Instead of a reply, i got deleted instead. I am yet to reach the max posts here to be able to inbox you, hence i am writing here. Could you atleast pls give me an answer?

A quick reminder: My account got suspended for a reason i do not know 4 days ago; and to report that, i wrote you on your skype the same day and day after. Instead of getting a reply, i was deleted instead.

So pls, what would you rather want me to do? forget the account just like that?

Hi OP, I am interested in buying DataProtector, I dont have the Funds now but would probably buy a 90 days package to evaluate its performance before going for a Lifetime License soon.

I want to know what is the minimum FUD time and how is its Runtime Performance and is it compatible with DarkTrack Alien 4.0 and BlackShades? Because I plan on using both of the Two

And does it crypt Silent XMR Miners? (Does not matter if it doesn't)

Looking forward to your reply

You cant expect the Seller to regularly or at all, perform tests on "Cracked" software. Besides that, I would say its safer and more compatible in all terms if you actually purchase a RAT. There are plenty of good RATS on the market that have updates and are well known among the crypters.

But I am sure if you did want to crypt those RATS - they would work fine with DataProtector. BlackShades does not have a good reputation and im sure you know why.

The FUD duration is nothing to be worried about im my experience. I am speaking for Myself, I have nothing to do with coding this product or selling it.

But I am sure if you did want to crypt those RATS - they would work fine with DataProtector. BlackShades does not have a good reputation and im sure you know why.

The FUD duration is nothing to be worried about im my experience. I am speaking for Myself, I have nothing to do with coding this product or selling it.

The seller could atleast have replied me politely, I know Blackshades in infamous but the only reason I wanted to use it was that its a very well coded piece of tool albeit Old and I cant help admire it, Besides I have Luminosity Link but it is down at the moment.

I also like # but its too expensive and does not have a Lifetime License.

Anyways i just wanted to know what is the products minimum FUD time and how long before Eset detects it.

Impossible to answer that question, it depends on where your file ends up, how many people access it, who you upload to, scan on, ect. including the overall user-base activities that week or month as well.

Im not going to continue to spam the sales thread. If you want support you're supposed to contact him privately not post here.

ok while the owner (no offence) can be quite rude and inconsiderate at times (probably because of a ridiculous amount of stupid questions) his product is top notch amazing fud results and constant updates the persistence is mediocre but if any faster would be detected in run time feel free to message my skype with any questions :) @ live:r22585

Sheriff1337 - November 30, 2017, 10:31 am

I've used the product for three months and here is my honest vouch.

Runtime: Bypasses most Major AV's but not all
Doesn't bypass: Windows Defender (???), Avira & Comodo & few less known ones.
In short, its probably a good choice to use this crypter for average results as it is a one of the better ones in this forum.

Wait why didn't you ask for help regarding the detections?... this is not a support thread this is the sales thread?

Answer: Coder probably has a little too much selfconfidence (or at least he thinks so), doesn't care about customers, but you've probably heard about that already in this thread.

Thank you for your "honest" review, but your "honest" review is inaccurate.
AVIRA was NEVER a problem and is still not a problem.
Comodo I never tested on, but I will give it a try this week.
Downloading an unsigned executable from a untrusted source, what the fuck do you think is going to happen?
So as you can see your "honest" review is not exactly accurate.

Windows Defender was detected and I asked for your help but you ignored.
Avira was detected and I asked for your help but you ignored - cool that it's seems to be working now - good job... it didn't when I asked you to help me.

Quote:Downloading an unsigned executable from a untrusted source, what the fuck do you think is going to happen?
So as you can see your "honest" review is not exactly accurate.

First of all you never asked if I sign my files- but now that you've mentioned it, indeed I do. I even use a service on this forum where I have gotten my Digital Signature (500+)\$ from so your point is kind of useless.
Secondly downloading an unsigned executable from an untrusted source shouldn't trigger Windows Defender, it should trigger SmartScreen.
And lastly my review was not fully based on the scanning results, but more of how you treat your customers.

But who am I to talk, your software isn't BAD and it didn't create any problems like a few other crypters did for me. I get that you face issues with stupid clients daily, but there was done nothing wrong on my side since I asked for help only. You banned me.
As you can see my review is honest. I don't want to take this any further, have a good one.

I have done many testing and finally have seen

n0\$f3ratu\$ bypassed Windows Defender. (The option will not remain on the crypter, but it DID BYPASS With NO ISSUES!)

n0\$f3ratu\$ HQ coder! Keep it up mate!

This is a looonggg ass video showing how DP is bypassing Windows Defender.

This video is NOT EDITED, CUT or MODIFIED in any way so you will see the file run, restart, scan, ect.

Keep in mind this video was made using two vm's in the same time with good configurations, but for some reason they still lag.

My laptop is more then ok (32 GB RAM, I7 processor, 8 GB video card).

Anyway I hope you will have the patience to watch it until the end.

Yes it can without a problem, but you should consider darkcomet is an old rat which is no longer maintained.

His pattern is known by all av's so it won't help you at all.

hi there, 2 quick questions regarding this product: do you offer file binding? how are the runtime detection rates with this?

also the product looks very attractive and the reviews are great, i am definitely considering purchasing this crypter.

You bought cybershit and now you come to me?!

Anyway yes is working just fine with #.

Also I am pretty sure cybershit is working just fine with #, just check your settings and ask the owner for help.

Empty stub on # the rest from crypter.

I recommend you to use startup folder.

Be careful when you choose the install folder so it won't require admin privileges.

End of tutorial.

Good luck. ?

Dude just follow the fucking settings I told you above and create a regular stub.
WTF is so hard?!

You don't deserve to get help from the others at this point.
You have SIMPLE instructions which you can't follow!
