Thread: [Rage Booter Source SHELLS Please Help... \[read<3\]](#)

hacker444 - March 24, 2015, 4:47 pm

Howdy.

I've recently started up SirStresser (changed it a bit, customized), at the end of everything, when I finished up, it remains so complicated for me. The part where I want to add shells, there is a file in my File Manger addshells.php but it doesn't show up in the sidebar, how do I exactly add shells?

Please help, skype: UnwantedAttention

Please.... I really need some help :'(

Try finding some shells in pastebin. Then use a program called Shell Cracker. Paste all the shells in there. Then start seeing if they are UDP or TCP.

What do I do after that tho? Do I just add them to the source, and its all good?

I'm thinking of buying a VPS, what do I do when I have a vps how do I connect it etc?
